Updated @October 15, 2025

BATTERY AND CHARGING ISSUES

Q: My ring's battery is draining very fast (lasting only 1-3 days). What can I do?

[Relevant SOP: Ring Battery- High drain]

🧠 User Intent

The user is facing faster-than-normal battery drain and wants to restore optimal performance (ideally **3.5+ days** of battery life).

🧭 Associate Steps

1. **Check TSW for High Battery Drain Cases**
   - Visit the Battery Troubleshooting Guide.
   - Check the user's **Troubleshoot Wizard (TSW) history** here: TSW History Check.
   - If the TSW wasn't triggered automatically, share the deeplink manually:

     👉 https://ultrahuman.onelink.me/QqSM/ren08swf
   - The wizard guides the user through firmware update, factory reset, and enabling Chill Mode.
2. **Wait for Chill Mode Data**
   - Request the user to enable **Chill Mode** and wear the ring normally for **48 hours**.
   - This enables the accurate collection of battery calibration data.
3. **Assess Battery Health (after 48 hours)**
   - Review the **Battery Dissipation Rate (BDR)** from Chill Mode data:
     - 🟢 Good: ≤1.0% per hour (~4 days)
     - 🟢 Optimal: ~0.5% per hour (~8 days)
     - 🔴 Replacement threshold: <3.5 days battery life even after Chill Mode calibration
   - If the threshold is below, proceed with the replacement flow (the system may prompt "Request Replacement").

🧩 Manual Troubleshooting (Edge Cases)

Use this when:

- The user is **irate or impatient** during the Chill Mode observation period, **or**
- The TSW doesn't trigger or fails midway.

Steps:

1. **Confirm Latest Firmware**
   - Guide the user to check for and install any available firmware update.
2. **Enable Chill Mode**
   - Open the Ultrahuman app → ring homepage → tap ring icon (top right) → *Choose Battery Usage Mode* → enable **Chill Mode**.
3. **Perform a Factory Reset**
   - From the ring battery view → scroll down → tap *Factory Reset* → follow prompts.
   - After reset, place the ring on the charger (red → off → green light after ~10 seconds).
   - Reconnect the ring manually or let it auto-connect.
   - Factory Reset Tutorial
4. **Monitor Post-Reset**
   - Ask the user to observe battery life over **two full charge cycles (100% → 10%)** and share feedback.

💬 Suggested Associate Message

> Thanks for flagging this! Let's make sure your ring's battery is back to normal.
>
> I'll share a quick link that walks you through the essential steps — it'll update your firmware, enable Chill Mode, and refresh your setup.
>
> Once that's done, please wear the ring for two days as usual. We'll review your battery data together afterward and take care of the rest if needed.

- Battery Troubleshooting Guide
- TSW History
- Factory Reset Tutorial (YouTube)
- Chill Mode Doc
- Backend Checks (Slack Thread)

🏷️ Tags

ring_battery_issues Ring_battery_dissipation_Replacement

🧩 Notes for Associates

- A **48-hour BDR (Battery Drain Rate)** in Chill Mode is required before assessing battery health.

Q. My ring died overnight, even though I charged it. Why?

🧠 User Intent

The user's ring appears dead despite charging overnight. They want to understand whether it's a **charging issue**, a **connection issue**, or a **battery drain** concern.

🧭 Associate Steps

1. **Start with a Full Charge**
   - Ask the user to place the ring snugly on the charger.
   - Confirm the charger is connected to a reliable power source:
     - A **standard USB adapter (max 20W, under 2A)** or laptop port.
   - The charger should display a **gentle, breathing white light** while charging.
   - Even if no light appears immediately, have the user **leave it for 2–3 hours** — sometimes the battery just needs recovery time.
2. **Check for Response**
   - After 2–3 hours, check if the ring reconnects or shows any activity in the app.
3. **If the Ring Powers On**
   - The issue might have been a one-off deep discharge.
   - If the user reports that it's draining faster than expected again, direct them to **Q1: "My ring's battery is draining very fast."**
4. **If the Ring Is Still Unresponsive After Charging**
   - Have the user check the **charger LED status** and clarify the situation:
     - 🟢 **Green light on charger, ring still appears dead:**

       → The ring *is charging* but likely has a **connection issue** (the app isn't reading the charge).

       → Guide the user through reconnection steps.
     - ⚪ **No LED or white light ever appears:**

       → Likely a **charging issue** — verify adapter, cable, and charger contacts.

       → Try another cable or USB port if available.- Proceed with Charger Issues SOP.
     - 🔋 **Ring connected but constantly shows 0% charge:**

       → It's not charging properly — proceed with **"Ring Not Charging" SOP**.

💬 Suggested Associate Message

> That's definitely not ideal! Let's get your ring back up and running.
>
> Please place it securely on the charger and let it sit for at least 2–3 hours. You should see a gentle white light if it's charging.
>
> If the charger shows a green light but the ring still appears dead in the app, it's probably just not syncing correctly — I'll guide you to reconnect.
>
> If the light doesn't appear or the ring stays at 0%, we'll check your charger and cable next to make sure power is flowing properly.

🏷️ Tags

ring_battery_issues ring_charger_issue

🧩 Notes for Associates

- Identify and document the **true cause** before tagging or escalating — is it a **charging error**, **connection issue**, or **battery drain case**?

Q. What is the actual expected battery life? The website says 4–6 days, but mine lasts less.

🧠 User Intent

The user wants clarity on **expected battery life** versus what they're personally experiencing. This is usually not a fault case — it's about setting realistic expectations and educating about factors that influence battery performance.

🧭 Associate Steps

1. **Set Realistic Expectations**
   - Inform the user that the **ideal battery life is 4–6 days,** depending on usage and environment.
   - In most real-world cases, **3.5–5 days** is normal and within the expected range.
2. **Explain Key Factors Affecting Battery Life**
   - **Usage intensity:** frequent workouts, Breathwork, or data-heavy tracking can use more power.
   - **Bluetooth stability:** Unstable connections increase energy usage.
   - **Ambient temperature:** extreme hot or cold conditions can temporarily impact performance.
   - **Firmware version:** ongoing updates continually improve battery optimization.
3. **Encourage Best Practices**
   - Recommend enabling **Chill Mode** to extend battery life by up to **35%**.
   - Advise users to keep their app and ring firmware **updated** for the best performance.
4. **If Battery Life Is Below 3 Days**
   - This is lower than expected, even for heavy users.
   - Guide them to **Q1: "My ring's battery is draining very fast,"** and follow the troubleshooting process there.

💬 Suggested Associate Message

> Great question — the ring's battery typically lasts 4–6 days under ideal conditions, but most users see around 3.5–5 days depending on their usage.
>
> Things like frequent workouts, Breathwork sessions, Bluetooth stability, and even ambient temperature can all affect performance a little.
>
> We're constantly improving this through firmware updates to give you the best experience possible.
>
> If you're seeing battery life consistently below 3 days, I can share a few steps that usually fix that quickly.

🏷️ Tags

`ring_battery_issues`

🧩 Notes for Associates

- A **battery life of 3.5–5 days** is considered *normal* and within operational range.
- Only treat as a **battery drain case** if usage is light and the battery drops below **3 days** consistently.

Q. My ring charges very quickly, but also drains very quickly. Is this normal?

🧠 User Intent

The user is reporting that the ring **charges faster than usual, but also drains unusually fast**. They want to know if this is expected behavior or a sign of a deeper issue.

🧭 Associate Steps

1. **Check Charging Setup**
   - Confirm what kind of **charger or adapter** the user is using.
   - The Ultrahuman Ring is designed for **standard 5V output** (max 20W, under 2A).
   - If the user is using a **fast charger,** it can lead to **inconsistent battery calibration** — ask them to switch to a regular USB adapter or laptop port.
   - Make sure the charging contacts are **clean and aligned** properly on the base.
2. **Go Through the Standard Battery Optimization Steps**
   - Guide the user through all steps from **Q1: "My ring's battery is draining very fast."**
     - Firmware update
     - Factory reset
     - Enable Chill Mode and observe the drain for 48 hours
3. **Set Expectation for Normal Behavior**
   - New rings might charge slightly slower during the first few cycles while the system calibrates.
   - After calibration, it's normal for charging speed to improve slightly — but rapid drain should **not** accompany that.
4. **Assess Drain Rate After Optimization**
   - If the ring still drops from **100% → 10% within 2–3 days**, even with moderate use and Chill Mode enabled, it indicates abnormal drain.

💬 Suggested Associate Message

> It's awesome that your ring charges fast, but it shouldn't be losing charge that quickly too.
>
> Let's first check what kind of charger you're using — the ring prefers a standard power source under 20W. Fast chargers can sometimes cause the battery to behave inconsistently.
>
> After that, I'll guide you through a few battery optimization steps like firmware update and Chill Mode.
>
> Once we've done those, we'll keep an eye on it for two days — if the battery still drains too fast, we'll get our team to review your ring's health in detail.

🏷️ Tags

ring_battery_issues Ring_battery_dissipation_Replacement

🧩 Notes for Associates

- Always verify **charger specifications** first — fast chargers can cause false full-charge readings or rapid drain cycles.
- If all standard battery SOPs are followed and the drain persists, escalate to the backend for **battery health assessment**.

Q. My ring isn't charging properly/ gets stuck at a certain percentage/ charger light is behaving oddly.

🧠 User Intent

The user is facing an issue where the **ring isn't charging properly**, gets **stuck while charging**, or the **charger LED behaves unexpectedly**. The associate's goal is to identify whether the issue lies with the **charger**, **adapter/cable**, or the **ring itself**.

🧭 Associate Steps

1. **Check the Power Setup**
   - Confirm the user is using a **standard adapter** (max 20W, under 2A) or a **laptop USB port**.
   - **Avoid fast chargers** or high-wattage adapters — they can interfere with charging.
   - If possible, have the user test with a **different charging cable or adapter** to isolate whether the issue is with the charger or the power source.
2. **Decode the Charger Light Behaviour**
   - **Charger plugged in, no ring:** should show **purple** light.
   - **Ring on charger, charging normally:** should show a **gentle, breathing white** light.
   - **Green light:** indicates the ring is **fully charged**.
   - **No light, red, or blinking light:** indicates a **charger malfunction** or power delivery issue.
3. **Check the Ring Placement**
   - Ensure the ring is correctly seated on the charger.
   - It fits only one way — a slight reposition or wiggle can help it align properly.
4. **Allow Adequate Charging Time**
   - Even if the LED doesn't appear right away, ask the user to **leave it on charge for at least 1–2 hours**.
   - Sometimes the battery needs time to respond after being deeply discharged.
5. **If Still Not Charging**
   - **Step 1:** Identify where the issue lies:
     - If the **LED is abnormal** (off, red, or blinking), → **likely a charger issue**.
     - If the **charger LED is fine** but the **ring still won't charge or is stuck,** → likely a **ring issue**.
   - **Step 2:**

- For **charger issues**, escalate under **“Ring Charger Issue” SOP**.
- For **ring-side issues**, ask the user to perform a **factory reset** and check for **visible hardware damage**.
- If the ring remains unresponsive post-reset or visible damage is found, proceed with **replacement** under the “Ring Not Charging / Hardware Damage” category.

💬 Suggested Associate Message

> Thanks for sharing that — charging issues can be frustrating, but we’ll get to the bottom of it together.
>
> First, let’s make sure you’re using a regular adapter (under 20W, not a fast charger), and that the ring is seated properly on the charger.
>
> You should see a gentle white light when it’s charging — purple when it’s plugged in without the ring.
>
> If you’re seeing a red or no light, it might be a charger issue. But if the charger looks fine and the ring still won’t charge, we can try a quick reset and check for any hardware issues before moving forward with a replacement.

🏷️ Tags

ring_battery_issues ring_charger_issue Ring_not_charging_replacement

---

🧩 Notes for Associates

- Identify whether the issue lies with the **charger hardware** (abnormal LED) or the **ring hardware** (normal charger light but no charging).
- For confirmed ring-side failures, ensure **factory reset and hardware check** are done before proceeding to replacement.

CONNECTION ISSUES

Q. My ring won’t connect to my phone/app. What should I do?

🧠 User Intent

The user’s ring is not connecting or showing up in the app. The associate needs to identify whether this is a **first-time pairing (DOA case)**, **Bluetooth/advertising issue**, or a **hardware-level problem**.

🧭 Associate Steps

1. **Check Connection Type**
   - Ask whether this is a **new ring (first-time setup)** or an **existing ring that suddenly stopped connecting.**
   - If it’s **brand new,** and the ring has never been connected before, handle it as a potential **DOA (Dead on Arrival)** case.
   - If previously working → proceed with the Troubleshooting Wizard flow.

---

1. **Run the Troubleshooting Wizard (TSW)**
   - Confirm app version:
     - Android ≥ **2.67.0**, iOS ≥ **2.73.0**

- Most users will be auto-prompted for the **Connection + Not Advertising TSW** (appears as a yellow banner).
- If the prompt doesn't appear, share this manual deeplink:

  👉 https://ultrahuman.onelink.me/QqSM/b3n6ggzh
- The wizard walks the user through:
  - Connection checks
  - Bluetooth resets
  - Battery drain reset
  - Deep reset (if needed)
- If the wizard recommends a replacement, the user will see the message:

  > "Thanks for running the diagnostics. Since you're still facing issues with ring connection, we'll dig deeper on our end and get back to you with the next steps shortly."

- Check the user's session:

  → **Ops → Troubleshooting → Troubleshooting Wizard Sessions → Search by user's email**
  - If "**show_replacement_recommendation**" appears, proceed with replacement.
  - If steps remain incomplete, ask the user to finish them first.
  - In edge cases (e.g., user is frustrated), associates can make a judgment call to proceed with replacement.

If TSW Is Not Applicable or the User Needs Manual Troubleshooting (not recommended until it's an edge case)

Step 1: Verify App & Bluetooth State

- Check backend status using the Advertisement Troubleshooting Dashboard by entering:
  - Email address
  - External ID
  - Ring serial number
- Confirm whether the ring is currently **advertising** or **not detected.**

Step 2: `Connection_TS1 Macro` — Basic Fixes

Step 3: Connection_TS2 Macro — Battery Drain Reset

- Trigger a **Battery Drain Reset** via the Advertisement Troubleshooting Dashboard.
- Check progress under the Battery Drain Reset Dashboard.
- The user will see a timer banner on their Ring tab showing estimated drain time.
  - If not visible → have them relaunch the app.
- Instruct user:

  > Do not place the ring on the charger until the battery is fully drained — this ensures a complete hardware reset.

- Once the ring is fully drained, the user will receive a push notification to reconnect.
- Ask them to **charge for at least 30 minutes** before reconnecting.

Step 4: Deep Reset (Final Step)

- If the ring is still not connecting or not advertising, guide the user to perform a **Deep Reset**:
  - Navigate to **Profile → Settings → Deep Reset** in the Ultrahuman app.

Step 5: Replacement

- If all the above steps fail or the backend shows a replacement recommendation, proceed under the **Ring Not Connecting / Advertising** or **DOA** category.

💬 Suggested Associate Message

> Thanks for flagging that! Let's first rule out the basics and then run through a quick connection check together.
>
> I'll share a small diagnostic link — it guides you through Bluetooth refresh, connection reset, and a quick drain reset if needed.
>
> If the system still can't detect your ring afterward, I'll check it manually and take the next step from our side (replacement if required).

- Ring DOA SOP
- Advertisement Troubleshooting Dashboard
- Battery Drain Reset Dashboard

🏷️ Tags

ring_connection_issues ring_not_advertising ring_DOA

🧩 Notes for Associates

- **Always start with TSW flow.**
- **Manual troubleshooting** only when the wizard is unavailable, incomplete, or the user insists on human guidance.

Q. My ring disconnects frequently, especially when starting workouts.

🧠 User Intent

The user's ring connects but frequently drops connection — especially during workouts or random intervals. The goal is to stabilize connectivity and determine whether the cause is **firmware**, **Bluetooth interference**, or **hardware-related**.

🧭 Associate Flow

1. **Confirm the Ring's Current Connection Status**
   - Check if the ring is **currently connected**.

- If **not connected at all**, treat it as a **connection issue** instead of a disconnection case.
- If connected, proceed with troubleshooting below.

2. **Check Firmware Version and Push Update (if applicable)**
   - Confirm both the **Ultrahuman app** and the **ring firmware** are updated.
   - If outdated, push the latest firmware using macro:
     `Macro: [Pushto_Zephyr]`
   - Note: Firmware can only be pushed when the ring is **connected.**
3. **Run the Standard Bluetooth Stability Check**
   - Toggle **Bluetooth OFF → wait 10 seconds → ON** again.
   - Restart the phone.
   - Reopen the Ultrahuman app and check if the connection stabilizes.
   - Macro for this step: `Macro: [Frequent_RingDisconnection]`
4. **Optimize Connection Settings on the Phone**
   - Ensure **Power Saver Mode** is off (battery >20%).
   - Turn off **Wi-Fi temporarily** if there's interference.
   - Confirm the Ultrahuman app has:
     - **Bluetooth permission**
     - **Location access**
     - **Background activity enabled** (so it's not auto-closed by the OS).
5. **Check Physical & Environmental Factors**
   - Ask if the user notices disconnects only during workouts or randomly.
   - Request pictures of the **inner walls and charging pins** of the ring.
   - Look for possible **hardware damage** (cracks, loose sensors, worn pins).
   - Suggest keeping the phone **within 1–2 meters** during workouts — gym Bluetooth congestion can also cause dropouts.
6. **Re-evaluate After Observation**
   - If the issue persists even after firmware update + Bluetooth reset + environmental checks:
     - Escalate to **replacement** under *"Ring Frequent Disconnection"*.
     - Add case note: "Firmware verified, Bluetooth refreshed, persistent dropouts observed."

💬 Suggested Associate Message

> Thanks for flagging this — I know how concerning it can be to lose connection mid-workout!
>
> Let's make sure your ring and app are fully updated first; I'll push the latest firmware if needed.
>
> Then we'll refresh your Bluetooth connection and double-check a few settings on your phone that keep the link strong.

> Once we've done that, please keep an eye on it for a few hours and let me know — if it still drops off, we'll check the ring hardware and replace it if needed.

💡 Helpful Resources

- Ring Frequent Disconnection SOP
- Advertisement Troubleshooting Dashboard
- `Macro: [Pushto_Zephyr]` (Firmware push)
- `Macro: [Frequent_RingDisconnection]` (Bluetooth refresh flow)

🏷️ Tags

`ring_connection _issues` `frequent_disconnection`

🧩 Notes for Associates

- Firmware updates can **only be pushed if the ring is connected.**
- Observe the disconnection pattern — short, frequent drops usually mean **Bluetooth instability**, while total loss or irregular connection may indicate **hardware damage**.
- Always collect **ring inner wall images** before approving replacements.

Q. My ring connects only when it's charging. Once removed from the charger, it disconnects.

🧠 User Intent

The user reports that their ring only connects to the Ultrahuman app while on the charger. Once removed, it disconnects immediately. This typically points to **firmware instability**, **battery malfunction**, or **hardware damage** near the charging or sensor area.

🧭 Associate Flow

Request Ring Images for Visual Inspection

- Ask the user to share **clear images of the inner walls and sensor area** of the ring.
- Check for any **battery bulge**, **visible swelling**, or **damage near the sensor.**
- If physical damage or swelling is visible → **proceed directly with replacement** under *"Hardware Damage SOP"*.

Check Firmware Version

- If the ring is connected **only while charging**, this is the right moment to push a firmware update.
- Confirm if the user's app is on the latest version; if not, ask them to update it first.
- Then, while the ring is still on the charger, push the latest firmware using:
- Once updated, please remove the ring from the charger and observe its connection stability. You shouldn't face this issue again.

If the Issue Persists After the Firmware Update

- If the ring continues to disconnect immediately after removal from the charger:
  - Proceed with **replacement** under "ring_battery_failure_replacement"

- Mention in notes:

  > “Firmware pushed successfully, no physical damage observed, persistent disconnecting off charger — proceeding with replacement.”

💬 Suggested Associate Message

> Thanks for sharing that! If your ring connects only while charging, let’s first check for any physical issues. Could you please send me a clear picture of the inner ring and sensor area?
>
> If there’s no visible damage, I’ll push the latest firmware to your ring while it’s charging — that usually resolves such behavior.
>
> Once updated, try taking it off the charger and see if it stays connected. If it still disconnects, don’t worry — we’ll replace it right away.

🏷️ Tags

`ring_battery_failure_replacement` `battery_issues`

🧩 Notes for Associates

- Always request **images first** to rule out visible damage or battery swelling.
- Firmware updates can be **pushed only while the ring is charging** in this case.
- If the issue persists post-update with **no visible damage**, proceed with replacement.

Q. The app says my ring is connected, but it’s not syncing data / says “Wear continuously.”

🧠 User Intent

The ring shows as connected but isn’t syncing recent data or displays a “Wear continuously” message. The goal is to confirm fit, sensor state, and fix data upload or contact detection issues.

Relevant SOPs:

- Ring Data not uploading

🧭 Associate Flow

1. **Check Basics**
   - Confirm the **ring fits snugly** and **sensors are clean** (facing the palm side).
   - Ask the user to share a **screenshot of the ring homepage** showing HR and temperature readings.

   If HR is visible: proceed to firmware update.

   If HR is missing, still proceed to firmware update (possible sensor issue).

---

2. **Firmware & Observation**
   - Push the **latest firmware update**.
   - Ask the user to keep the ring on and **observe for 15 minutes** to check if HR and skin temperature appear.

---

3. **If Data Still Missing**
   - Ask the user to start a **short Breathwork or Workout mode (30 sec)** to activate sensors.
   - If the **green light appears**, observe for HR to show on the home tab:
     - If HR appears → All good (old data won't backfill).
     - If HR doesn't appear → proceed with **Factory Reset**.
   - If **no green light** appears → go straight to **Factory Reset**.

---

4. **After Factory Reset**
   - Have the user wear the ring and observe for **15 minutes** again.
   - If HR now shows → All good.
   - If HR is still missing → check **Ring State** on the dashboard:
     - **Ring State 10 / 20 / HR9 present** → HR sensor issue → replace.
     - **No Ring State 10 / HR9 missing** → Data not uploading → replace.

💬 Suggested Associate Message

> Thanks for sharing that! Let's check a few quick things to get your data syncing again.
>
> I'll update your ring to the latest firmware and have you observe for 15 minutes.
>
> If the readings still don't appear, we'll try a quick reset to refresh the connection — and if needed, I'll help arrange a replacement right after.

🏷️ Tags

`ring_not_uploading_data replacement` `ring_not_uploading_data` `Ring_ State_10`

🧩 Notes for Associates

- Always confirm **fit and cleanliness** first.
- **Firmware → Breathwork test → Factory Reset** is the flow.
- **Ring State 10/20/255** → Sensor issue.
- **No state & no HR data** → Data upload issue.

Q. I can't update my firmware; it fails or says battery is too low (even if charged).

🧠 User Intent

The user's firmware update is failing, either showing "battery too low" or not progressing. The goal is to confirm charge, stabilize Bluetooth, and retry the update — escalating only if multiple resets fail.

🧭 Associate Flow

1. **Check Basics**
   - Confirm the ring is **charged at least 50%**.
   - Ask the user to **keep the ring on its charger** and **phone nearby** during the update.
   - Recommend minimizing other Bluetooth connections.

2. **Restart & Retry**
   - Have the user restart both their **phone and the Ultrahuman app**.
   - Ask them to remove and re-place the ring on the charger, then retry the firmware update.
3. **If Update Still Fails**
   - Trigger a **Soft Reset** from the backend.
   - Once complete, have the user retry the firmware update.
4. **If It Continues to Fail**
   - Ask the user to perform a **Factory Reset** on the ring and attempt the update again.
   - If the firmware update still does not go through, collect **screenshots or error messages** and **flag the case for the tech team** for review.

💬 Suggested Associate Message

> Thanks for letting us know! Firmware updates need a stable connection and a good charge.
>
> Please make sure your ring is at least 50% charged and on its charger while updating.
>
> I'll trigger a quick reset from our side — once that's done, please try the update again.
>
> If it still doesn't go through, we'll try a quick factory reset and take it from there.

🧩 Notes for Associates

- Always confirm **battery ≥50%** before triggering resets.
- **Soft reset → Factory reset → Tech flag** is the escalation order.
- Collect **screenshots** for tech review in persistent cases.

ORDERS, SIZING, AND SHIPPING

Q: I received my sizing kit. How do I submit my ring size and color choice? / The app won't let me select my size/color.

🧠 User Intent

The user has received their sizing kit and wants to finalize their **ring size and color selection**.

🧭 Associate Flow

1. **Guide the User to Submit Size and Color**
   - Ask the user to wear their **best-fitting size for at least 48 hours** to confirm comfort and fit.
   - Once ready, guide them to:
     - Open the **Ultrahuman app** → tap the **Ring tab**, or
     - Use their order tracking link: https://www.ultrahuman.com/ring/order (Unique for each order)
   - Tap **"Track It"** or **"Edit Order"** to select the **final ring size** and **preferred color.**
2. **If the User Can't Update via App**

- Associates can manually update size or color from the **Ring Order → Edit section** in the backend.

💬 Suggested Associate Message

> Awesome — glad your sizing kit has arrived! Once you've tried the sample for about 48 hours, just open the app or click your tracking link.
>
> Tap *"Track It"* or *"Edit Order"* to choose your final size and color.
>
> If that doesn't work for any reason, I can update it manually for you right here.

🏷️ Tags

ring_sizing_kit_faqs ring_sizing_kit_fit_issues ring_size_colour_edit

Q. Can I change my ring size or color after I've already confirmed it?

🧠 User Intent

The user wants to change their **ring size or color** after confirming their order.

🧭 Associate Flow

1. **Check If the User Can Edit via Tracking Link**
   - Ask them to open their **order tracking link** (e.g., https://bit.ly/uhorder) and look for the **"Edit Order"** option.
   - Edits are usually allowed until the order status shows **"Processed"** or **"Preparing for Dispatch."**
2. **If the Edit Option Isn't Available**
   - This may happen if:
     - The order has **different pricing across variants**, or
     - The order is already **allocated or shipped.**
   - **If allocated:** flag to the logistics/order team to check if an edit is still possible.
   - **If shipped:** politely inform the user that changes can't be made once dispatched.
3. **Reassure the User (Size Exchange Option)**
   - If the user's concern is **size**, remind them that we offer a **30-day size exchange window** if the fit isn't right.
   - The same applies to color variants — they can request a change once they've received the ring.

💬 Suggested Associate Message

> That's a great question — in most cases, yes, you can still make changes before your order is processed.
>
> Just open your tracking link and tap *"Edit Order."* If that option isn't visible, it likely means the order's already been allocated or shipped.
>
> If it's already shipped, don't worry — we offer a **30-day exchange window** in case your size or color doesn't feel right once you try it on.

🏷️ Tags

`ring_size_colour_edit`

Q. Where is my order/sizing kit? When will it ship or arrive?

🧠 User Intent

The user wants to know the **status or expected delivery** of their sizing kit or ring order.

🧭 Associate Flow

1. **Guide the User to Track Their Order**
   - Ask them to open their order tracking link (from the confirmation email or app):

     👉 https://bit.ly/uhorder (Unique for each user)
   - They can view **current status, estimated ship date, and tracking details** once available.
2. **Set Delivery Expectations**
   - **Sizing kits:** usually ship within **48 hours**, though minor delays can occur by region.
   - **Rings:** typically dispatch within **7–10 business days** after size confirmation (depending on color and size availability).
   - **Delivery time:** usually **4–7 business days** once shipped.
3. **If There's an Unusual Delay**
   - Check backend order details and **flag to the Operations team** for review and update if the order appears stuck or delayed beyond normal timelines.

💬 Suggested Associate Message

> Totally get the excitement — we can't wait for you to get it either!
>
> You can track your order or sizing kit anytime using your tracking link: https://bit.ly/uhorder. (Unique for each user)
>
> Sizing kits usually go out within 48 hours, and rings ship about 7–10 business days after you confirm your size.
>
> If it seems unusually delayed, I'll flag it to our operations team right away and make sure you get an update soon.

🏷️ Tags

`ring_logistics_ETA`

Q. I need to change my shipping address after ordering.

🧠 User Intent

The user wants to update their **shipping address** after placing an order.

🧭 Associate Flow

1. **If the Order Hasn't Shipped Yet**
   - Ask the user to open their **order tracking link**: https://bit.ly/uhorder (Unique for each user)

- If the new address is **within the same country**, they can usually update it directly via the link (before the order is processed).
- If they're unable to edit or the new address is in a **different country**, collect:
  - **Order ID**
  - **Full new address details**

    → Then update it on OMS and mention it on the Cx-ops channel to the respective Ops POC.

2. **If the Order Has Already Shipped**
   - Once dispatched, the address can't be changed directly from Ultrahuman's side.
   - Suggest the **post-dispatch features** offered by the logistics partner (as per Slack reference) — e.g., local reroute, pickup point change, or delivery reschedule.
   - If none of those options work, then only **flag the Ops team POC** with full user details for further assistance.

💬 Suggested Associate Message

> Let's see what we can do about that!
>
> If your order hasn't shipped yet, you can usually update the address yourself from your tracking link: https://bit.ly/uhorder. (Unique for each user)
>
> If it's already shipped, most of our delivery partners offer post-dispatch options like rerouting or pickup changes — I can share those details with you.
>
> If that's not possible, I'll flag it to our Ops team right away to see what can be done.

🏷️ Tags

`logistics_address_contact_update`

🧩 Notes for Associates

- Confirm shipping status before committing to an edit.
- Use **post-dispatch reroute features** for shipped orders whenever possible.
- Escalate to **Ops POC** only when the user can't self-serve via tracking or partner tools.

REFUNDS, RETURNS, AND CANCELLATIONS

Q. How do I return my ring for a refund? What's the policy?

🧠 User Intent

The user wants to understand the **return and refund policy** and how to initiate the process.

🧭 Associate Flow

1. **Confirm Eligibility**
   - The user has a **30-day return window** from the date the ring was **delivered or activated**.
   - If the user is within this window, proceed to the next step.

- If outside the window, please act according to the new Refund Policy.

2. **Engage & Assist**
   - Ask the reason for the return — if it's an issue, offer to troubleshoot first (many cases can be resolved quickly).
   - If the user still prefers to return, confirm return initiation.
3. **Start the Return Process**
   - Inform the user that the **return label** will be generated and shared within **2–3 business days**.
   - Ask them to pack the **ring and charger securely** and hand it over to the designated courier (USPS / FedEx / DHL).
4. **Refund Timeline**
   - Once the return is received or scanned as in transit, initiate refund processing.
   - Refunds typically reflect in **5–7 business days** via the original payment method.

💬 Suggested Associate Message

> Absolutely — here's how our return process works:
>
> You have **30 days from delivery or activation** to decide if you'd like to return your ring.
>
> If you're still within that window, I'll start the process and have your return label sent in about 2–3 business days.
>
> Once you ship the ring and charger back, we'll process your refund — it usually appears in your account within **5–7 business days**.
>
> If there's an issue we can fix before that, I'm happy to help troubleshoot too!

🏷️ Tags

`ring_refund`

🧩 Notes for Associates

- Always confirm the **delivery or activation date** before approving returns.
- Offer troubleshooting first if the issue seems fixable (battery, connection, etc.).
- Once the return is initiated, track the label and refund completion in the backend.

Q. I need to cancel my order before it ships.

🧠 User Intent

The user wants to cancel their **order before dispatch** and understands the refund process.

🧭 Associate Flow

1. **Confirm Order Status**
   - Ask the user for their **Order ID**.
   - Check if the order has been **processed for dispatch** (packed or marked "Ready to Ship").
   - If it hasn't been processed yet, proceed with cancellation.

2. **Cancel and Refund**
   - Cancel the order in the system.
   - Inform the user that a **full refund** will be issued to their original payment method.
   - Refunds typically reflect in **5–7 business days**.
3. **If the Order Is Already Processed or Shipped**
   - Explain that cancellation isn't possible at this stage.
   - Offer to assist once the item arrives — e.g., via **return or exchange** options.

💬 Suggested Associate Message

> Got it — let's take care of that for you.
>
> If your order hasn't been packed or marked for dispatch yet, we can cancel it right away and issue a full refund.
>
> The refund will appear in your account within **5–7 business days**.
>
> If it's already shipped, we can still help once it arrives — you'll be able to request a return or exchange easily.

🏷️ Tags

`ring_refund`

🧩 Notes for Associates

- Always verify the **order dispatch status** before confirming cancellation.
- Refund timelines: **5–7 business days** after processing.
- For shipped orders, the direct **return policy** applies instead.

Q. My ring arrived, but I want to return it (changed mind, duplicate gift, not satisfied).

🧠 User Intent

The user wants to return their ring for **non-technical reasons,** such as a duplicate gift, a change of mind, or general dissatisfaction.

🧭 Associate Flow

1. **Confirm Eligibility**
   - The user must be within the **30-day return window** from the delivery or activation date.
   - If eligible, proceed with the return process.
2. **Collect Return Reason**
   - Ask the user for a brief reason (e.g., *"Received as duplicate," "Not as expected"*).
   - No troubleshooting needed for these cases — proceed directly to return initiation.
3. **Initiate Return Process**
   - Generate and share **return shipping labels** (usually within **2–3 business days**).

- Instruct the user to **pack the ring and charger securely** and hand them to the designated courier (USPS / FedEx / DHL).

4. **Refund Timeline**
   - Once the return is received or marked “in transit,” the refund is processed automatically.
   - Refunds usually reflect in **5–7 business days** via the original payment method.

💬 Suggested Associate Message

> No problem at all — we can help with that!
>
> Just reach out within **30 days** of delivery, and we’ll start your return process.
>
> We’ll send you a prepaid return label within a couple of business days so you can ship the ring and charger back.
>
> Once we receive it, your refund will be processed — it usually takes **5–7 business days** to reflect in your account.

🏷️ Tags

logistics_reverse_pick_up ring_refund

🧩 Notes for Associates

- Confirm return eligibility (within 30 days).
- No need for troubleshooting — direct return flow applies.
- Track return label and refund confirmation in the backend.

DATA ACCURACY

Q23. My step count seems inaccurate compared to my Apple Watch/Fitbit.

🧠 User Intent

The user reports differences in step count compared to other wearables. The goal is to confirm accuracy, ensure ring fit and firmware are correct, and clarify expectations.

Relevant SOP: Incorrect Movement Index

🧭 Associate Flow

1. **Set Expectations**
   - Explain that a **10–15% variation** between devices is normal since the ring tracks motion from the **finger** while watches track from the **wrist**.
   - Different algorithms and positions cause natural differences.
2. **Check Fit & Cleanliness**
   - Confirm the ring fits **snugly** (not loose or rotating).
   - Sensors (green lights) should face the **inner side of the palm**.
   - Ask the user to **clean the sensors** if dusty or oily.
3. **Verify Firmware**

- Confirm the ring is on the **latest firmware**.
- If outdated, push the update using `#Pushto_Zephyr` and ask the user to observe for 24 hours.

4. **Factory Reset (If Needed)**
   - If step counts remain significantly off, suggest a **factory reset** to recalibrate.
5. **If the Issue Persists**
   - Reassure that **step tracking optimization is ongoing** and firmware updates will continue to improve accuracy.
   - Clarify that **Apple Watch** is the only valid point of comparison.
   - **Do not flag these cases** — close them after sharing the explanation.

💬 Suggested Associate Message

> Thanks for checking this! Small differences in step counts are normal since the ring tracks motion from your finger while watches do it from your wrist.
>
> Let's make sure your ring fits snugly and is updated — that usually improves tracking.
>
> If it's still noticeably off, a quick reset can help recalibrate.
>
> We're continuously improving accuracy through firmware updates, so future versions will keep getting better.

🏷️ Tags

`Ring incorrect movement_index`

🧩 Notes for Associates

- 10–15% variance is normal.
- Only the **Apple Watch** comparison is valid.
- Don't flag these — log, explain, and close.

Q24. My sleep wasn't tracked last night / Sleep data seems inaccurate.

🧠 User Intent

The user reports **missing or inaccurate sleep data**. The goal is to verify fit, firmware, and sensor behavior, then identify if it's a **fit issue**, **sensor issue**, or **data upload problem**.

Relevant SOP: Incorrect Sleep Data

🧭 Associate Flow

1. **Check the Basics**
   - Was the **ring charged (≥30–50%)** before bedtime?
   - Is the **ring fit snug** (not loose, sensors touching skin)?
   - Did the user **sync the ring in the morning** to pull sleep data into the app?
   - Ask them to **clean sensors** gently and check for **firmware updates**.

---

2. **If User Reports *No Sleep Data at All***

- Verify **ring fit and orientation** — sensors should face the palm side.
- Push the **latest firmware** (if not already updated).
- Ask the user to **observe for the next sleep cycle**.
- Check the **Sleep Diagnosis Dashboard** for HR and motion data.

Based on Diagnosis:

- **No data on dashboard:** Follow the **data not uploading** flow.
- **HR data visible but high motion / missing HR spikes:** likely **fit issue** → push a *soft reset* and suggest wearing on a **different finger** for 24 hrs.
- **Missing HR/temp data (Ring State 10 or 20):** likely **sensor issue** → perform a *factory reset* and ask user to observe for another 24 hrs.
- If still no sleep data → **flag to tech team** for review.

---

3. **If User Reports *Partial Sleep or Missing Chunks***
   - Reconfirm **fit and firmware** status.
   - Check the **Sleep Diagnosis Dashboard** for HR/motion patterns.
   - If motion/HR interruptions appear, treat as a **fit issue** (suggest swapping fingers and soft reset).
   - If consistent missing HR/temp data, treat as a **sensor issue** (factory reset and observe 24 hrs).
   - If the battery drops overnight, follow **Battery TS flow** instead.

---

4. **Known States**
   - **Ring State 10 / 20** → Sensor issue → Factory Reset and observe.
   - **Ring State 255** → Hardware-level sensor issue → Factory Reset; if persists, flag to tech.

💬 Suggested Associate Message

> Thanks for flagging that! Let's check a few things to make sure your sleep is tracked correctly.
>
> Ensure your ring was charged before bed, fits snugly, and the sensors are clean.
>
> I'll push the latest firmware to your ring — please observe for tonight's sleep cycle.
>
> If it still misses or shows partial sleep data, we'll do a quick reset and review the sensor data to fix it.

🏷️ Tags

`Ring_incorrect_sleep_data`

🧩 Notes for Associates

- Always verify **fit**, **battery**, and **firmware** first.
- **Ring State 10 / 20 / 255** → treat as sensor issue.
- Do not flag for product issue unless the sensor fails post-reset + next sleep cycle.

Q: My ring's battery is draining very fast (lasting only 1-3 days). What can I do?

[Relevant SOP: Ring Battery- High drain]

Oh no, that doesn't sound right! Battery life is super important. Let's see if we can get it lasting longer for you:

1. **First things first, let's get everything up-to-date:**

- Open your Ultrahuman app, tap the Ring icon, scroll down, and select "Check for firmware update."
- If there's an update for your app or ring, go ahead and install it. Sometimes these updates have significant battery improvements!

2. Let's now factory reset the ring as well**:**

- (Ring battery view > scroll down > factory reset > follow the prompts). Once this is done, keep the ring on the charger and you will notice a green LED light when the ring is placed on the charger. At this point, the ring will disconnect from the phone which is expected behaviour so don't worry! Once you see the green light, remove the ring from the charger and connect the ring.

You can click here and view the process to factory reset the ring.

After this, your ring should get connected and you shouldn't face these issues :) Let us know if you need any help!

3. **Now, let's enable the optimised battery mode -"Chill mode"** ❄️

To enable Chill Mode for your ring, please follow the steps below:

a. Click on the ring icon on the top right of the ring homepage

b. Click on Choose a Battery Usage Mode

c. Toggle - Chill mode

4. With chill mode enabled, please observe your battery drain now for at least 48 hours.

- Wear your ring as you normally would and just keep an eye on how quickly the battery goes from 100% down to about 10%.
- Notice if anything specific, like lots of workouts, seems to be using more juice.

5. **Still draining too quickly?** If you've tried these steps, especially the full charge + extra hour, and after a couple of full cycles it's still not lasting at least 3.5 days with your usual use, it's best to reach out to our support team. They can look into it further and check on your battery health backend. [Backend checks for CX team]

Q: My ring died overnight even though I charged it. Why?

[Relevant SOP: Ring Battery- High drain]

That's definitely not what we want to happen! Let's try to bring it back to life and figure out what's going on:

1. **Let's try charging it up:**

- Place your ring nice and snug on its charger.
- Make sure the charger is plugged into a good power source (a standard USB adapter – max 20W, under 2A – or your laptop should do the trick).
- You should see a gentle, breathing white light on the charger if it's happy and charging.
- Even if you don't see a light right away, let it sit and charge for at least 2-3 hours. Sometimes it just needs a little time.

2. **Any signs of life?** After a few hours, check if your ring is responding or if it's connecting to the app.

3. **If it's back on but you're worried about the drain:**

- Hop back to the answer for "My ring's battery is draining very fast" and try the steps above.

4. **If it's still not turning on:**

- If you have another charging cable or USB adapter, it's worth trying those, just in case.
- If it remains unresponsive after a good long charge with accessories you know are working, please get in touch with our support team. It could be a hardware issue that needs a closer look.

Q: What is the actual expected battery life? The website says 4-6 days, but mine lasts less.

That's a great question! Ideally, your ring should give you 4-6 days of battery on a single charge. In the real world, it's usually around 3.5 to 5 days. This can vary a bit depending on:

- How you use it (lots of workouts or Breathwork sessions can use a bit more power).
- How stable your Bluetooth connection is.
- Even the temperature around you!
- We're always working on firmware updates to make it even better.

Using Chill Mode can also help it go the extra mile. If you're consistently getting less than 3 days with fairly light use, the tips under "My ring's battery is draining very fast" might be helpful!

Q: My ring charges very quickly but also drains very quickly. Is this normal?

[Relevant SOP: Ring Battery- High drain]

It's great that it charges up fast! But if it's also draining super quickly, that's something we should look into. Also, to note - brand new rings sometimes take a bit more time to charge than rings that have been used for a while.

1. Please go through all the steps we listed in the answer for "My ring's battery is draining very fast" (that's the one about updating, factory reset, chill mode + monitoring).

2. **How fast is "too fast"?** If, after those steps, your ring is still going from 100% to 10% in less than 2-3 days, especially if you're not using features heavily, then that's a bit unusual.

3. **Time to call in the experts:** If that rapid drain just won't quit, please contact our support team. They can dig deeper and see if a factory reset or even a replacement evaluation is needed.

Q: My ring isn't charging properly / gets stuck at a certain percentage / charger light is behaving oddly.

Relevant SOPs: Ring Charger Issue, Ring not charging

Charging issues can be a real trouble! Let's see if we can get that sorted out:

1. **Check your power setup:**

- Are you using a standard USB power adapter (max 20W, under 2A is best) or a USB port on your laptop? Sometimes those super-fast phone chargers can be a bit much for it - avoid using a fast charger, please.

- If you have another charging cable or USB adapter handy, give them a try. It helps us figure out if the issue is with the ring, cable, or adapter.

2. **A little quick cleaning for the contacts:**

- Gently wipe the gold charging contacts on your ring and the pins on the charger dock. A dry, soft cloth is perfect. If you use a cotton swab with a tiny bit of isopropyl alcohol, just make sure it's completely dry before you try charging again.

3. **Let's decode the charger light:**

- **Charger plugged in, no ring:** You should see a purple light.
- **Ring on charger, charging happily:** It should be a gentle, breathing white light.
- Make a note if you see any other colors (like red) or if the light is off or blinking strangely.

4. **Is it sitting right?** Make sure the ring is nestled onto the charger correctly. It usually only fits one way, so a little wiggle can sometimes help it find its spot.

5. **Give it some time:** Even if the light isn't quite right, leave the ring on the charger for an hour or two. Sometimes it just needs a moment to get going.

6. **Still no luck?** If it's being stubborn and won't charge, or if that LED is still not showing up as expected, please reach out to our support team. Let them know what kind of adapter/cable you used, what the light was doing, and what you've tried.

CONNECTION ISSUES

Q: My ring won't connect to my phone/app. What should I do?

Relevant SOPs: Ring not Connecting/Advertising, Ring only connects on the charger, Ring DOA

Connection hiccups are no fun! Let's first check whether the ring isn't connecting on the first instance when it's brand new (DOA - dead on arrival), and if not - if there is any pattern to the issue (for instance, is there an issue with the charger, does the ring frequently disconnect throughout the day?). Let's then try a few steps.

Let's rule out the basics:

1. **Turn Off Power Saver Mode on Your Phone :** Low battery (below 20%) can degrade Bluetooth performance. Charge your phone to maintain a stable connection.
2. **Disconnect Unused Bluetooth Devices :** Having too many connected devices can block new connections. Disconnect unused devices from your phone's Bluetooth settings.

Then, continue troubleshooting with these:

1. **Switch Off Wi-Fi Temporarily :** Wi-Fi can occasionally interfere with Bluetooth. Turn it off briefly to improve connectivity.
2. **Toggle Bluetooth Off/On :** Turn Bluetooth off, wait a few seconds, then turn it back on to refresh the connection.
3. **Complete a Bluetooth Reset :** Keep the Ring on the charger → Turn off Bluetooth → Force-close the app → Re-enable Bluetooth → Remove the Ring from paired devices → Re-pair it via the Ultrahuman app.
4. **Try a Different Cable or Adapter :** Faulty USB-C cables or power adapters can disrupt charging and connectivity. Switch both the cable and the power source (preferably a wall socket-based adapter).
5. **Reinstall the Ultrahuman App :** Uninstall and reinstall the app from the App Store to fix persistent issues.

As a last resort, we'll perform a Battery Drain Reset. This step ensures the ring undergoes a complete hardware reset, clearing its internal state and helping resolve issues related to Bluetooth connectivity or advertising.

1. We have triggered the battery drain reset for you. You should now see a banner with a timer on the Ring tab of your app. This timer estimates the time it will take for the battery to fully drain. **Note: If you don't see the banner, try killing and relaunching the app.**

Please do not place the Ring on the charger until the battery is completely drained, or it will interrupt the reset process.

2. Once the battery is fully drained, you'll receive a push notification prompting you to reconnect. Please charge the ring for at least 30 minutes before you reattempt connecting the ring.

If the ring still does not connect after completing this step, please let the Support team know, and they will assist you further.

Q: My ring disconnects frequently, especially when starting workouts.

Relevant SOP: Ring Frequent Disconnection

That sounds really frustrating, especially when you're trying to get a workout in! Let's see if we can make that connection more stable:

1. Make sure your Ultrahuman app and your ring's firmware are both updated to the newest versions. Updates often include fixes for things like this. If not upto date, please note - a new firmware can only be pushed backend when the ring is connected.

2. Try to keep your phone relatively close to your ring, particularly during workouts. Sometimes other Bluetooth gadgets or even just being in a crowded area can cause a little interference.

3. **Let's refresh your phone's Bluetooth connection to the ring:**

- Go into your phone's Bluetooth settings and "Forget" or "Unpair" the ring.
- Toggle your phone's Bluetooth off, wait a moment, then turn it back on.
- Give your phone a quick restart.
- Then, reconnect your ring through the Ultrahuman app.

4. **Check the app's permissions:** Make sure the Ultrahuman app has all the permissions it needs, like for Bluetooth, Location (which often helps with Bluetooth scanning), and to run in the background.

5. **Is your phone trying to save *too much* battery?** Check your phone's battery optimization settings. Sometimes phones can be a bit aggressive and close apps like ours to save power. Make sure Ultrahuman is allowed to do its thing.

6. **Any patterns?** Does it seem to happen more in certain places or during specific activities?

7. **If it's still an issue:** Please let our support team know. Tell them your phone model, its OS version, and any patterns you've noticed.

Q: The app says my ring is connected, but it's not syncing data / says "Wear continuously".

Relevant SOPs: Ring Data not uploading, Ring State 10- No contact detected

This often points to small errors in syncing or maybe the ring isn't getting good contact. Let's try this:

1. **Is your ring fitting well and clean? (This can help with "No contact detected" messages):**

- Make sure your ring is snug – not too loose that it wiggles around, but not uncomfortably tight either.
- Give the sensors on the inside of the ring a quick wipe to make sure they're clean and facing your palm (or whichever way is correct for your model).

2. **Try a manual refresh and an app restart:**

- In the app, try pulling down on the main screen. This often tells it to try syncing again.
- Completely close the Ultrahuman app and then reopen it.

3. **Is your phone connected to the internet?** The app needs a stable internet connection (Wi-Fi or mobile data) to sync data to your account.

4. **A quick reboot for everyone:** Restart both your ring (if there's a way to do that) and your phone.

5. **Toggle Power Saving Mode:** Sometimes toggling Power Saving Mode in the app OFF and then ON again (or the other way around if it was on) can kickstart the connection.

6. **Still holding onto its data?** If you've tried these steps and your data still isn't showing up after a few hours or an overnight sleep, it's a good idea to contact support.

Q: I can't update my firmware; it fails or says battery is too low (even if charged).

Firmware updates can be a bit sensitive! They need a nice, stable environment to work properly.

1. **Give it an adequate charge:** Before you start an update, make sure your ring is charged up to at least 50% – even more is better, just to be safe.

2. **Create a calm update zone:**

- Place your ring securely on its charger.
- Keep your phone close by the ring during the whole update.
- Try to minimize other Bluetooth activity on your phone while it's updating (like streaming music to headphones).

3. **Try, try again (after a restart):**

- Restart your phone and the Ultrahuman app.
- It can also help to take the ring off the charger for a moment and then put it back on.
- Then, try starting the firmware update again.

4. **If it's still being stubborn, let's reset Bluetooth:** Follow step 4 from "My ring won't connect" (that's the one about re-pairing Bluetooth).

5. **Still no go?** If it just keeps failing, make a note of any error messages you see and reach out to our support team. They can often help get things unstuck!

ORDERS, SIZING AND SHIPPING

Q. I received my sizing kit. How do I submit my ring size and color choice?

Here’s how to lock in your size and color:

- Once you've worn the sample sizers (we recommend trying your best fit for a full 48 hours if you can, just to be sure it's comfy!), hop into the Ultrahuman app.
- You can usually find your order details under the 'Ring' tab, or you can use the order tracking link we sent you (it looks something like [Link like https://bit.ly/uhorder]).
- Look for an option like "Track It/Edit Order" or something similar. Give that a click, and you'll be able to choose your final size and favorite color.

Q: The app won't let me select my size/color, only shows 'Processing' or sizing kit 'Not Shipped'.

- Sometimes there's a little delay. Try giving it a few hours and then trying again.
- If, after about 24 hours from receiving your kit, you still can't select your size and color, don't worry! Just reach out to our support team with your Order ID and let them know your preferred Size & Color. They can usually update it for you manually.

Q: Can I change my ring size or color after I've already confirmed it?

Good question! In many cases, yes, you can still make a change.

- The best way is to use that order tracking link again ([Link like https://bit.ly/uhorder]). You can usually tweak your size and color selection there right up until your order status changes to "Processed" or "Preparing for Dispatch."
- Once it hits that stage, it means your ring is getting ready to be shipped, so changes are generally not possible then. So, if you're thinking of a change, it's best to do it sooner rather than later!
- You can also reach out to the Support team, and they will check what they can do to get this sorted out for you.

Q: Where is my order/sizing kit? When will it ship/arrive?

Eager to get your hands on it, we totally get that!

- You can keep an eye on your order's progress, including estimated shipping dates and tracking links once it's on its way, by using the order tracking link from your confirmation email or through the app: [Link like https://bit.ly/uhorder].
- Sizing kits usually ship out pretty quickly (within 48 hours, but can be a bit delayed depending on your exact location)! For the ring itself, dispatch depends on the size and color you choose, but it's typically within 7-10 business days after you've confirmed your size. If demand is super high, there might be slight delays.
- Once it ships, it usually takes about 4-7 business days to arrive at your doorstep.

Q: I need to change my shipping address after ordering.

Let's see what we can do about that shipping address!

- If your order hasn't shipped out yet, you *might* be able to update the address yourself using the order tracking link ([Link like https://bit.ly/uhorder]), especially if the new address is in the *same country*.
- However, if you need to change the country, or if the link isn't letting you make edits, please get in touch with our support team *as soon as possible*. Give them your Order ID and the full, correct new address details.
- Just a heads-up, once an item has actually shipped, changing the address becomes quite tricky, so quick action is best here!

REFUNDS, RETURNS AND CANCELLATIONS

Q: How do I return my ring for a refund? What's the policy?

Here's how our return policy works:

- You have a 30-day window from the date your ring was delivered or activated to decide if you'd like to return it.
- If you're thinking about a return within this period, please reach out to our support team and let them know why. Sometimes, we might be able to help with a bit of troubleshooting first if there's an issue we can solve!
- If you decide to go ahead with the return, we'll get the process started and send you shipping labels (this usually takes about 2-3 business days).
- You'll then need to pack up the ring and charger securely and drop it off with the designated courier (like USPS, Fedex, or DHL).
- Once we receive the return, or confirm it's been shipped back, we'll process your refund to your original payment method. This usually takes about 5-7 business days to reflect in your account.

Q: I need to cancel my order before it ships.

If you need to cancel your order, the best thing to do is contact our support team as quickly as you can with your Order ID.

- If your order hasn't been processed for dispatch yet (meaning it's not packed up and ready to go), we can usually cancel it right away for you.
- We'll then issue a full refund, which should show up in your account within 5-7 business days.

Q: My ring arrived, but I want to return it (changed mind, duplicate gift, not satisfied).

No problem at all! If your ring has arrived but you'd like to return it for reasons like changing your mind, receiving it as a duplicate gift, or if it's just not meeting your expectations, we can help.

- Just make sure to contact our support team within that 30-day return window.

- Let them know your reason for the return (e.g., "Received as a gift duplicate," or "Not quite what I was expecting").
- They'll then walk you through the return process, which includes getting shipping labels to you so you can send the ring back.
- Once we receive it, your refund will be processed, typically within 5-7 business days.

DATA ACCURACY

Q: My step count seems inaccurate compared to my Apple Watch/Fitbit.

Relevant SOPs: Incorrect Movement Index

It's pretty common for different wearables to show slightly different step counts! Here's a bit about why and what to check:

1. **Different tech, different results:** Your ring measures movement from your finger, while a watch measures it from your wrist. Different devices also use different algorithms. Things like typing or playing an instrument might look different to each device. A 10-15% discrepancy is considered acceptable in this regard.

2. **How's the fit?** Make sure your ring is snug enough that it can feel all your movements accurately.

3. **Keep those sensors clean:** A quick wipe of the sensors inside the ring can sometimes help.

4. **Are you on the latest firmware?** We often make improvements to our step-counting algorithms in updates.

5. **Worried it's counting *no* steps (or very few)? Let's test it:**

- Try going for a short, deliberate walk – say, 100 steps, and count them in your head.
- Then, sync your ring and see if the count is in the same ballpark.
- If no steps are showing up, please follow the steps for "Ring Steps 0 - no steps picked"

6. **A quick restart can't hurt:** Try restarting both your ring and your phone if the counts seem way off.

7. **If there's a big, consistent difference:** If you notice your ring is always *very* different from other devices you trust, especially during dedicated walks, it might be helpful to share some comparison data with our support team so they can take a look.

Q: My sleep wasn't tracked last night / Sleep data seems inaccurate.

Relevant SOP: Incorrect Sleep data

Let's first check the following:

1. **Did it have enough battery for the night shift?** Make sure your ring was charged to at least 30-50% before you went to bed.

2. **Was it worn snugly?** If the ring is too loose, it might lose contact with your skin during the night.

3. **Did it sync up this morning?** Make sure your ring connects and syncs with the app after you wake up to transfer that precious sleep data.

4. **Try a restart:** A quick restart of your ring (if there's a procedure for it) and your phone can sometimes clear things up.

5. **Check for firmware updates:** New firmware can often improve sleep tracking accuracy.

6. **Clean sensors = happy sensors:** Give the sensors on the inside of the ring a gentle clean.

7. **Still having sleep tracking troubles?** If your sleep data is consistently missing or seems very off after checking these things, please get in touch with our support team.

Q: Where is my SpO2 (Oxygen Saturation) data? I can't find it.

Good question! Your SpO2 is measured while you sleep - i.e. the ring currently measures only nocturnal SpO2 - but we're working on releasing round-the-clock oxygen saturation monitoring soon!

1. **Where to look:** After your sleep data has synced in the morning, you should find your average SpO2 reading on the Sleep Index page in the app, usually towards the bottom.

2. **Is Power Saving Mode on?** Make sure Power Saving Mode is turned OFF overnight. This mode disables SpO2 readings to save battery.

3. **Did you get enough sleep?** It usually needs a decent sleep session to record SpO2.

4. **Try toggling Power Saving:** If Power Saving Mode was definitely off and you still don't see SpO2, try turning it ON for a minute, then OFF again. Then check again after your next night's sleep.

Q: My workout wasn't detected automatically / My logged workout disappeared.

- **Automatic Detection:** Your ring is pretty smart and tries to automatically detect workouts like walking or running when it notices a sustained elevated heart rate and the right kind of movement. However, it might not catch every single type of workout, especially things like weightlifting or yoga where the movement patterns are a bit different.
- **Pro Tip:** For guaranteed tracking of any workout, it's always best to manually start 'Workout Mode' in the app before you begin. That way, you know it's definitely recording!
- **Logged Workout Disappeared?** It is frustrating if something you manually logged has vanished! That sounds like it could be a rare sync glitch.
- First, try completely closing and restarting the Ultrahuman app. Sometimes that's all it takes for things to reappear.
- Also, double-check that your ring was properly connected to your phone during and right after you logged the workout.
- If it's still missing, give it a little time; sometimes data can take a short while to fully sync up. If it doesn't show up after a reasonable wait and an app restart, it might be worth reaching out to support.

Q: How do I log food / add custom food items?

Tracking your food can be super insightful! Here's how you can log it in the Ultrahuman app:

- Look for a '+' button or a 'Log Event' button in the app. Tap that, select 'Food,' and then you can search for the item you ate.

- **Adding Custom Foods:** Now, when it comes to adding *brand new, custom* food items that aren't already in our database, the app (based on the info we have) might not have a direct "add custom item" feature right now.
- What you can often do is find the closest existing equivalent in the database.
- Alternatively, you could try logging the main components of your meal separately if they are available.
- For the most up-to-date info on this, the app's help section or a quick message to our support team would be your best bet!

HARDWARE ISSUES

Q: My ring's sensor lights (green/red) aren't turning on. Or - I see a constant red light on the ring.

Relevant SOP: HR Sensor Failure: Constant Red light on the ring (or no lights at all)

The little sensor lights are key to how your ring works! Normally, you'll see green lights flashing now and then, or staying on steadily if you're in a workout. A red light can sometimes mean an issue, or it might be part of a reset. No lights at all could also indicate an issue here.

1. **Is the ring charged and on?** First, make sure your ring has enough battery and is connected to your app.

2. **Give the sensors a gentle clean:** Wipe the optical sensor window on the inside of your ring.

3. **Try a restart:** Restart your ring (you might need to place it on and off the charger, or check for a specific reset procedure) and also restart your phone.

4. **Test it with a workout:** Try manually starting a workout from the app. This should usually make the green lights turn on.

5. **What are the lights (or lack of lights) doing?**

- Are you *never* seeing any green lights at all?
- Is there a red light that's stuck on and *not* blinking as part of a reset?

6. **If the lights are still erratic:** If they consistently don't turn on as expected (no green, or a weird, persistent red light), it's best to contact our support team. It could be a sensor issue that needs a closer look, and they can advise.

Q: My ring is physically damaged (cracked, deformed, stuck on charger). What should I do?

If your ring has suffered some physical damage:

1. **Please get in touch with our support team right away.**

2. **Share some photos or a quick video:** Clear pictures of the damage (like a crack or if it's bent) or the issue (like being stuck on the charger) are super helpful for them.

3. **Let them know what happened (if you know):** For example, if it was dropped, exposed to chemicals, or if there was an issue with how it fit on the charger.

4. **They'll guide you from here:** Support will take a look based on your warranty or UltrahumanX plan (if you have one) and let you know the next steps, including if a replacement is possible. Please don't try to force the ring if it's stuck, as that could cause more problems.

[Hardware damage SOP sheet]

Q: Can I swim or shower with the ring? What temperatures can it withstand?

Great question about where you can take your ring!

- The Ultrahuman Ring AIR is water-resistant up to 100 meters. So, yes, you can definitely swim and shower with it on. No need to take it off for your daily splashes or your laps in the pool!
- **Temperature Limits:** Now, about temperatures – your ring is comfortable in a range from -20°C to 60°C (that's -4°F to 140°F). So saunas and ice baths are all good!
- This means most everyday situations are perfectly fine.

SUBSCRIPTIONS AND WARRANTY

Q: I purchased UltrahumanX / Cardio Adaptability but it's not showing as active in my app.

This can sometimes happen, and often it's down to a simple email mix-up.

- The most common reason is that the purchase might have been made with a different email address than the one you use to log into the Ultrahuman app.
- **Here's what to do:** Please get in touch with our support team. It's super helpful if you can provide them with both your *purchase email* (the one used to buy the subscription) and your *app login email*. They can then get that subscription activated on the right account for you.
- **DIY Option:** You might also spot a "Transfer Ring & Add Ons" option in the app, usually under Profile > Settings. Sometimes, you can use this to link things up yourself!

Q: What does the UltrahumanX plan cover?

Great question! UltrahumanX is our optional coverage and benefits plan, designed to give you some extra peace of mind and perks. Here's a quick rundown:

Our 1-Year Plan typically includes:

- Protection against accidental damage (for one claim).
- Access to priority support, so you get help even faster.
- An enhanced trade-in value if you decide to upgrade later on.

Our 2-Year Plan usually offers all the goodies from the 1-Year plan, PLUS:

- One-time coverage for theft or loss of your ring.
- A special weight loss replacement benefit. This means if you've had a significant weight change after using the ring for at least 6 months and it no longer fits well, you might be eligible for a one-time size replacement (you'll usually need to provide some proof of the weight change). [Guidelines]
- It's always a good idea to check the specific terms when you sign up, as details can sometimes be updated!

Q: My ring was a gift with subscriptions. How do I activate them on my account?

Getting those subscriptions activated on your account is usually pretty straightforward.

- The best way is to contact our support team.
- Let them know your app login email.
- If you can, it's also super helpful to provide the *purchaser's email address* (the person who gifted it to you) or the original *Order ID* for the purchase.
- With that info, support can verify the included subscriptions and get them all linked up and active on your account so you can start enjoying the benefits!

Q: Is the warranty/UltrahumanX valid if I buy the ring in one country and move to another?

- UltrahumanX is region-specific so it won't reflect for you or work while you are travelling. Once you're back in your home country, it should work fine! :)
- While the coverage is global, there might occasionally be specific regional limitations or differences in how service fulfillment is handled. In case you have relocated, please contact the Support team so they can adjust your subscription accordingly. They can also give you the most accurate info for your new location.

Q: How does the weight loss replacement work under the 2-year UltrahumanX plan?

If you've been on an amazing health journey and your ring no longer fits because of significant weight loss, we want to help you keep tracking. [Guidelines]

- **Here's how it generally works:**
- You'll need to have the 2-year UHX plan.
- You should have been using your ring for at least 3 months.
- The weight loss needs to be significant enough that your current ring is genuinely too loose to wear properly.
- If you meet these criteria, you may be eligible for a one-time replacement ring in your new, correct size!
- To get this process started, you'll usually need to provide some proof of your weight loss. This could be things like logs from a verified scale or app, or perhaps transformation photos.
- The best first step is to contact our support team. They can walk you through the specifics and help you initiate the replacement process. Congratulations on your progress, by the way!

If you still can't find the answers you're looking for, here's a bunch of documents you can refer to. Remember you can also quick-search [command + F on Mac, keyboard shortcut Windows key + S on windows] keywords to find relevant information!

Revised TOP FAQ/SOPs

Updated @October 15, 2025

BATTERY AND CHARGING ISSUES

Q: My ring's battery is draining very fast (lasting only 1-3 days). What can I do?

🧠 User Intent

The user is facing faster-than-normal battery drain and wants to restore optimal performance (ideally **3.5+ days** of battery life).

🧭 Associate Steps

1. **Check TSW for High Battery Drain Cases**

●

Visit the .

●

Check the user's

Troubleshoot Wizard (TSW) history

here: .

●

If the TSW wasn't triggered automatically, share the deeplink manually: 👉

●

The wizard guides the user through firmware update, factory reset, and enabling Chill Mode.

2. **Wait for Chill Mode Data**

●

Request the user to enable

Chill Mode

and wear the ring normally for

48

hours

.

●

This allows battery calibration data to collect accurately.

3. **Assess Battery Health (after 48 hours)**

Revised TOP FAQ/SOPs 1

●

Review the

Battery Dissipation Rate (BDR)

from Chill Mode data:

○

🟢 Good: ≤1.0% per hour (~4 days)

○

🟢 Optimal: ~0.5% per hour (~8 days)

○

🔴 Replacement threshold: <3.5 days battery life even after Chill Mode calibration

●

If below threshold, proceed with replacement flow (the system may prompt “Request Replacement”).

🧩 Manual Troubleshooting (Edge Cases)

Use this when:

●

The user is

irate or impatient

during the Chill Mode observation period,

or

●

The TSW doesn’t trigger or fails midway.

Steps:

1. **Confirm Latest Firmware**

●

Guide the user to check for and install any available firmware update.

2. **Enable Chill Mode**

●

Open the Ultrahuman app → ring homepage → tap ring icon (top right) →

Choose Battery Usage Mode

→ enable

Chill Mode

.

3. **Perform a Factory Reset**

●

From the ring battery view → scroll down → tap

Factory Reset

→ follow prompts.

●

After reset, place the ring on the charger (red → off → green light after ~10 seconds).

●

Reconnect the ring manually or let it auto-connect.

●

4. **Monitor Post-Reset**

●

Ask the user to observe battery life over

two full charge cycles (100% →

10%)

and share feedback.

Revised TOP FAQ/SOPs 2

💬 Suggested Associate Message

Thanks for flagging this! Let's make sure your ring's battery is back to normal.

I'll share a quick link that walks you through the essential steps — it'll update your firmware, enable Chill Mode, and refresh your setup.

Once that's done, please wear the ring for two days as usual. We'll review your battery data together afterward and take care of the rest if needed.

💡 **Helpful Resources**

●

●

●

🏷️ Tags

ring_battery_issuesRing_battery_dissipation_Replacement

🧩 Notes for Associates

●

A

48-hour BDR (Battery Drain Rate)

in Chill Mode is required before assessing battery health.

Q. My ring died overnight even though I charged it. Why?

🧠 User Intent

The user's ring appears dead despite charging overnight. They want to understand whether it's a **charging issue**, **connection issue**, or **battery drain** concern.

🧭 Associate Steps

Revised TOP FAQ/SOPs 3

1. **Start with a Full Charge**

●

Ask the user to place the ring snugly on the charger.

●

Confirm the charger is connected to a reliable power source:

○

A

standard USB adapter (max 20W, under 2A)

or laptop port.

●

The charger should display a

gentle, breathing white light

while charging.

●

Even if no light appears immediately, have the user

leave it for 2–3 hours

— sometimes the battery just needs recovery time.

2. **Check for Response**

●

After 2–3 hours, check if the ring reconnects or shows any activity in the app.

3. **If the Ring Powers On**

●

The issue might have been a one-off deep discharge.

●

If the user reports that it's draining faster than expected again, direct them to

Q1: "My ring's battery is draining very fast."

4. **If the Ring Is Still Unresponsive After Charging**

●

Have the user check the

charger LED status

and clarify the situation:

○

🟢

Green light on charger, ring still appears dead:

→ The ring *is charging* but likely has a **connection issue** (the app isn't reading the charge).

→ Guide the user through reconnection steps.

○

⚪

No LED or white light never appears:

→ Likely a **charging issue** — verify adapter, cable, and charger contacts.

→ Try another cable or USB port if available.- proceed with Charger Issues SOP.

○

🔋

Ring connected but constantly shows 0% charge:

→ It’s not charging properly — proceed with **“Ring Not Charging” SOP** .

Revised TOP FAQ/SOPs 4

💬 Suggested Associate Message

That’s definitely not ideal! Let’s get your ring back up and running.

Please place it securely on the charger and let it sit for at least 2–3 hours. You should see a gentle white light if it’s charging.

If the charger shows a green light but the ring still appears dead in the app, it’s probably just not syncing correctly — I’ll guide you to reconnect.

If the light doesn’t appear or the ring stays at 0%, we’ll check your charger and cable next to make sure power is flowing properly.

🏷️ Tags

ring_battery_issuesring_charger_issue

🧩 Notes for Associates

●

Identify and document the

true cause

before tagging or escalating — is it a

charging error

,

connection issue

, or

battery drain case

?

Q. What is the actual expected battery life? The website says 4–6 days, but mine lasts less.

🧠 User Intent

The user wants clarity on **expected battery life** versus what they’re personally experiencing. This is usually not a fault case — it’s about setting realistic expectations and educating about factors that influence battery performance.

🧭 Associate Steps

1. **Set Realistic Expectations**

●

Inform the user that the

ideal battery life is 4–6 days

depending on usage and environment.

●

In most real-world cases,

3.5–5 days

is normal and within expected range.

2. **Explain Key Factors Affecting Battery Life**

Revised TOP FAQ/SOPs 5

- **Usage intensity:**

frequent workouts, Breathwork, or data-heavy tracking can use more power.

- **Bluetooth stability:**

unstable connections increase energy usage.

- **Ambient temperature:**

extreme hot or cold conditions can temporarily impact performance.

- **Firmware version:**

ongoing updates continually improve battery optimization.

3. **Encourage Best Practices**

- Recommend enabling

Chill Mode

to extend battery life by up to

35%

.

- Advise users to keep their app and ring firmware

updated

for best performance.

4. **If Battery Life Is Below 3 Days**

- This is lower than expected, even for heavy users.

●

Guide them to

Q1: “My ring’s battery is draining very fast”

and follow the troubleshooting process there.

💬 Suggested Associate Message

Great question — the ring’s battery typically lasts 4–6 days under ideal conditions, but most users see around 3.5–5 days depending on their usage.

Things like frequent workouts, Breathwork sessions, Bluetooth stability, and even ambient temperature can all affect performance a little.

We’re constantly improving this through firmware updates to give you the best experience possible.

If you’re seeing battery life consistently below 3 days, I can share a few steps that usually fix that quickly.

🏷️ Tags

ring_battery_issues

🧩 Notes for Associates

Revised TOP FAQ/SOPs 6

●

A

battery life of 3.5–5 days

is considered

normal

and within operational range.

●

Only treat as a

battery drain case

if usage is light and battery drops below

3 days

consistently.

Q. My ring charges very quickly but also drains very quickly. Is this normal?

🧠 User Intent

The user is reporting that the ring **charges faster than usual but also drains unusually fast**. They want to know if this is expected behavior or a sign of a deeper issue.

🧭 Associate Steps

1. **Check Charging Setup**

●

Confirm what kind of

charger or adapter

the user is using.

- The Ultrahuman Ring is designed for

standard 5V output

(max 20W, under 2A).

- If the user is using a

fast charger,

it can lead to

inconsistent battery

calibration

— ask them to switch to a regular USB adapter or laptop port.

- Make sure the charging contacts are

clean and aligned

properly on the base.

2. **Go Through Standard Battery Optimization Steps**

- Guide the user through all steps from

Q1: “My ring’s battery is draining

very fast.”

  - Firmware update

  - Factory reset

  - Enable Chill Mode and observe drain for 48 hours

3. **Set Expectation for Normal Behavior**

●

New rings might charge slightly slower during the first few cycles while the system calibrates.

Revised TOP FAQ/SOPs 7

●

After calibration, it’s normal for charging speed to improve slightly — but rapid drain should

not

accompany that.

4. **Assess Drain Rate After Optimization**

●

If the ring still drops from

100% → 10% within 2–3 days

, even with moderate use and Chill Mode enabled, it indicates abnormal drain.

💬 Suggested Associate Message

It’s awesome that your ring charges fast, but it shouldn’t be losing charge that quickly too.

Let’s first check what kind of charger you’re using — the ring prefers a standard power source under 20W. Fast chargers can sometimes cause the battery to behave inconsistently.

After that, I’ll guide you through a few battery optimization steps like firmware update and Chill Mode.

Once we’ve done those, we’ll keep an eye on it for two days — if the battery still drains too fast, we’ll get our team to review your ring’s health in detail.

🏷️ Tags

ring_battery_issuesRing_battery_dissipation_Replacement

🧩 Notes for Associates

●

Always verify

charger specifications

first — fast chargers can cause false full-charge readings or rapid drain cycles.

●

If all standard battery SOPs are followed and drain persists, escalate to backend for

battery health assessment

.

Q. My ring isn’t charging properly / gets stuck at a certain percentage / charger light is behaving oddly.

🧠 User Intent

Revised TOP FAQ/SOPs 8

The user is facing an issue where the **ring isn't charging properly**, gets **stuck while charging**, or the **charger LED behaves unexpectedly**. The associate's goal is to identify whether the issue lies with the **charger**, **adapter/cable**, or the **ring itself**.

🧭 Associate Steps

1. **Check the Power Setup**

●

Confirm the user is using a

standard adapter

(max 20W, under 2A) or a

laptop USB port

.

●

Avoid fast chargers

, or high-wattage adapters — they can interfere with charging.

●

If possible, have the user test with a

different charging cable or adapter

to isolate whether the issue is with the charger or power source.

2. **Decode the Charger Light Behaviour**

●

Charger plugged in, no ring:

should show

purple

light.

●

Ring on charger, charging normally:

should show a

gentle, breathing

white

light.

●

Green light:

indicates the ring is

fully charged

.

●

No light, red, or blinking light:

indicates a

charger malfunction

or power delivery issue.

3. **Check the Ring Placement**

●

Ensure the ring is correctly seated on the charger.

●

It fits only one way — a slight reposition or wiggle can help it align properly.

4. **Allow Adequate Charging Time**

●

Even if the LED doesn't appear right away, ask the user to

leave it on

charge for at least 1–2 hours

.

●

Sometimes the battery needs time to respond after being deeply discharged.

Revised TOP FAQ/SOPs 9

5. **If Still Not Charging**

●

Step 1:

Identify where the issue lies:

○

If

LED is abnormal

(off, red, or blinking) →

likely a charger issue

.

○

If

charger LED is fine

but

ring still won't charge or is stuck

→ likely a

ring issue

.

●

Step 2:

○

For

charger issues

, escalate under

"Ring Charger Issue" SOP

.

○

For

ring-side issues

, ask the user to perform a

factory reset

and check for

visible hardware damage

.

○

If the ring remains unresponsive post-reset or visible damage is found, proceed with

replacement

under "Ring Not Charging / Hardware Damage" category.

💬 Suggested Associate Message

Thanks for sharing that — charging issues can be frustrating, but we'll get to the bottom of it together.

First, let’s make sure you’re using a regular adapter (under 20W, not a fast charger), and that the ring is seated properly on the charger.

You should see a gentle white light when it’s charging — purple when it’s plugged in without the ring.

If you’re seeing a red or no light, it might be a charger issue. But if the charger looks fine and the ring still won’t charge, we can try a quick reset and check for any hardware issues before moving forward with a replacement.

🏷️ Tags

ring_battery_issuesring_charger_issueRing_not_charging_replacement

🧩 Notes for Associates

●

Identify whether the issue lies with

charger hardware

(abnormal LED) or

ring hardware

(normal charger light but no charging).

Revised TOP FAQ/SOPs 10

●

For confirmed ring-side failures, ensure

factory reset and hardware check

are done before proceeding to replacement.

CONNECTION ISSUES

Q. My ring won’t connect to my phone/app. What should I do?

🧠 User Intent

The user’s ring is not connecting or showing up in the app. The associate needs to identify whether this is a **first-time pairing (DOA case)**, **Bluetooth/advertising issue**, or a **hardware-level problem**.

🧭 Associate Steps

1. **Check Connection Type**

●

Ask whether this is a

new ring (first-time setup)

or an

existing ring that

suddenly stopped connecting.

●

If

brand new

, and the ring has never connected before, handle as a potential

DOA (Dead on Arrival)

case.

●

If previously working → proceed with the Troubleshooting Wizard flow.

1. **Run the Troubleshooting Wizard (TSW)**

●

Confirm app version:

○

Android ≥

2.67.0

, iOS ≥

2.73.0

●

Most users will be auto-prompted for the

Connection + Not Advertising

TSW

(appears as a yellow banner).

●

If the prompt doesn't appear, share this manual deeplink:

👉

●

The wizard walks the user through:

○

Connection checks

○

Bluetooth resets

○

Battery drain reset

Revised TOP FAQ/SOPs 11

○

Deep reset (if needed)

●

If the wizard recommends a replacement, the user will see the message:

“Thanks for running the diagnostics. Since you're still facing issues with ring connection, we'll dig deeper on our end and get back to you with the next steps shortly.”

●

Check the user’s session:

→ **Ops → Troubleshooting → Troubleshooting Wizard Sessions → Search by user’s email**

○

If “

show_replacement_recommendation

” appears, proceed with replacement.

○

If steps remain incomplete, ask the user to finish them first.

○

In edge cases (e.g., user is frustrated), associates can make a judgment call to proceed with replacement.

If TSW Is Not Applicable or User Needs Manual Troubleshooting (not recommended until its an edge case)

Step 1: Verify App & Bluetooth State

●

Check backend status using the by entering:

○

Email address

○

External ID

○

Ring serial number

●

Confirm whether the ring is currently

advertising

or

not detected.

Step 2: Connection_TS1 Macro — Basic Fixes

Step 3: Connection_TS2 Macro — Battery Drain Reset

●

Trigger a

Battery Drain Reset

via the .

●

Check progress under the .

Revised TOP FAQ/SOPs 12

●

The user will see a timer banner on their Ring tab showing estimated drain time.

○

If not visible → have them relaunch the app.

●

Instruct user:

Do not place the ring on the charger until the battery is fully drained — this ensures a complete hardware reset.

●

Once the ring is fully drained, the user will receive a push notification to reconnect.

●

Ask them to

charge for at least 30 minutes

before reconnecting.

Step 4: Deep Reset (Final Step)

●

If the ring is still not connecting or not advertising, guide the user to perform a

Deep Reset

:

○

Navigate to

Profile → Settings → Deep Reset

in the Ultrahuman app.

Step 5: Replacement

●

If all above steps fail or the backend shows a replacement

recommendation, proceed under **Ring Not Connecting / Advertising** or **DOA** category.

💬 Suggested Associate Message

Thanks for flagging that! Let's first rule out the basics and then run through a quick connection check together.

I'll share a small diagnostic link — it guides you through Bluetooth refresh, connection reset, and a quick drain reset if needed.

If the system still can't detect your ring afterward, I'll check it manually and take the next step from our side (replacement if required).

ring_connection_issuesring_not_advertisingring_DOA

🧩 Notes for Associates

●

Always start with TSW flow.

●

Manual troubleshooting

only when wizard unavailable, incomplete, or user

insists on human guidance.

Q. My ring disconnects frequently, especially when starting workouts.

🧠 User Intent

The user's ring connects but frequently drops connection — especially during workouts or random intervals. The goal is to stabilize connectivity and determine whether the cause is **firmware**, **Bluetooth interference**, or **hardware-related**.

🧭 Associate Flow

1. **Confirm the Ring's Current Connection Status**

- Check if the ring is **currently connected**.
- If **not connected at all**, treat as a **connection issue** instead of a disconnection case.
- If connected, proceed with troubleshooting below.

2. **Check Firmware Version and Push Update (if applicable)**

- Confirm both **Ultrahuman app** and **ring firmware** are updated.
- If outdated, push the latest firmware using macro:

Macro: [Pushto_Zephyr]

●

Note: Firmware can only be pushed when the ring is

connected.

3. **Run the Standard Bluetooth Stability Check**

Revised TOP FAQ/SOPs 14

●

Toggle

Bluetooth OFF → wait 10 seconds → ON

again.

●

Restart the phone.

●

Reopen the Ultrahuman app and check if the connection stabilizes.

●

Macro for this step: Macro: [Frequent_RingDisconnection]

4. **Optimize Connection Settings on the Phone**

●

Ensure

Power Saver Mode

is off (battery >20%).

●

Turn off

Wi-Fi temporarily

if there's interference.

●

Confirm the Ultrahuman app has:

○

Bluetooth permission

○

Location access

○

Background activity enabled

(so it’s not auto-closed by the OS).

5. **Check Physical & Environmental Factors**

●

Ask if the user notices disconnects only during workouts, or randomly.

●

Request pictures of the

inner walls and charging pins

of the ring.

●

Look for possible

hardware damage

(cracks, loose sensors, worn pins).

●

Suggest keeping the phone

within 1–2 meters

during workouts — gym

Bluetooth congestion can also cause dropouts.

6. **Re-evaluate After Observation**

●

If the issue persists even after firmware update + Bluetooth reset +

environmental checks:

○

Escalate to

replacement

under

“Ring Frequent Disconnection”

.

Add case note: “Firmware verified, Bluetooth refreshed, persistent

dropouts observed.”

💬 Suggested Associate Message

Thanks for flagging this — I know how concerning it can be to lose connection

mid-workout!

Revised TOP FAQ/SOPs 15

Let’s make sure your ring and app are fully updated first; I’ll push the latest firmware if needed.

Then we’ll refresh your Bluetooth connection and double-check a few settings on your phone that keep the link strong.

Once we’ve done that, please keep an eye on it for a few hours and let me know — if it still drops off, we’ll check the ring hardware and replace it if needed.

💡 Helpful Resources

Macro: [Pushto_Zephyr] (Firmware push)

Macro: [Frequent_RingDisconnection] (Bluetooth refresh flow)

🏷️ Tags

ring_connection _issuesfrequent_disconnection

🧩 Notes for Associates

Firmware updates can

only be pushed if the ring is connected.

Observe the disconnection pattern — short, frequent drops usually mean

Bluetooth instability

, while total loss or irregular connection may indicate

hardware damage

.

●

Always collect

ring inner wall images

before approving replacements.

Q. My ring connects only when it’s charging. Once removed from the charger, it disconnects.

🧠 User Intent

The user reports that their ring only connects to the Ultrahuman app while on the charger. Once removed, it disconnects immediately. This typically points to **firmware instability**, **battery malfunction**, or **hardware damage** near the charging or sensor area.

Revised TOP FAQ/SOPs 16

🧭 Associate Flow

Request Ring Images for Visual Inspection

●

Ask the user to share

clear images of the inner walls and sensor area

of the ring.

●

Check for any

battery bulge

,

visible swelling

, or

damage near the sensor.

●

If physical damage or swelling is visible →

proceed directly with replacement

under

“Hardware Damage SOP”

.

Check Firmware Version

●

If the ring is connected

only while charging

, this is the right moment to push a firmware update.

●

Confirm if the user's app is on the latest version; if not, ask them to update it first.

●

Then, while the ring is still on the charger, push the latest firmware using:

●

Once updated, please wear the ring off the charger and observe its connection stability. You shouldn't face this issue again.

If Issue Persists After Firmware Update

●

If the ring continues disconnecting immediately after removal from charger:

○

Proceed with

replacement

under "ring_battery_failure_replacement"

○

Mention in notes:

"Firmware pushed successfully, no physical damage observed, persistent disconnecting off charger — proceeding with

replacement."

💬 Suggested Associate Message

Thanks for sharing that! If your ring connects only while charging, let's first check for any physical issues. Could you please send me a clear picture of the inner ring and sensor area?

Revised TOP FAQ/SOPs 17

If there's no visible damage, I'll push the latest firmware to your ring while it's charging — that usually resolves such behavior.

Once updated, try taking it off the charger and see if it stays connected. If it still disconnects, don't worry — we'll replace it right away.

🏷️ Tags

ring_battery_failure_replacementbattery_issues

🧩 Notes for Associates

- Always request **images first** to rule out visible damage or battery swelling.
- Firmware updates can be **pushed only while the ring is charging** in this case.
- If the issue persists post-update with **no visible damage**, proceed with replacement.

Q. The app says my ring is connected, but it’s not syncing data / says “Wear continuously.”

🧠 User Intent

The ring shows as connected but isn’t syncing recent data or displays a “Wear continuously” message. The goal is to confirm fit, sensor state, and fix data upload or contact detection issues.

Relevant SOPs:

- ———— ——————————— ——————

🧭 Associate Flow

1. **Check Basics**
   - Confirm the **ring fits snugly** and **sensors are clean** (facing the palm side).
   - Ask the user to share a **screenshot of the ring homepage** showing HR and temperature readings.

If HR is visible: proceed to firmware update.

Revised TOP FAQ/SOPs 18

If HR missing: still proceed to firmware update (possible sensor issue).

2. **Firmware & Observation**

- Push the **latest firmware update**.
- Ask the user to keep the ring on and **observe for 15 minutes** to check if HR and skin temperature appear.

3. **If Data Still Missing**

- Ask the user to start a **short Breathwork or Workout mode (30 sec)** to activate sensors.
- If the **green light appears**, observe for HR to show on the home tab:
  - If HR appears → All good (old data won't backfill).
  - If HR doesn't appear → proceed with **Factory Reset**.
- If **no green light** appears → go straight to **Factory Reset**

.

4. **After Factory Reset**

●

Have the user wear the ring and observe for

15 minutes

again.

●

If HR now shows → All good.

●

If HR still missing → check

Ring State

on the dashboard:

○

Ring State 10 / 20 / HR9 present

→ HR sensor issue → replace.

○

No Ring State 10 / HR9 missing

→ Data not uploading → replace.

💬 Suggested Associate Message

Thanks for sharing that! Let's check a few quick things to get your data syncing again.

I'll update your ring to the latest firmware and have you observe for 15 minutes. If the readings still don't appear, we'll try a quick reset to refresh the connection — and if needed, I'll help arrange a replacement right after.

🏷️ Tags

Revised TOP FAQ/SOPs 19

ring_not_uploading_data replacementring_not_uploading_data Ring_ State_10

🧩 Notes for Associates

●

Always confirm

fit and cleanliness

first.

●

Firmware → Breathwork test → Factory Reset

is the flow.

●

Ring State 10/20/255

→ Sensor issue.

●

No state & no HR data

→ Data upload issue.

Q. I can't update my firmware; it fails or says battery is too low (even if charged).

🧠 User Intent

The user's firmware update is failing, either showing "battery too low" or not progressing. The goal is to confirm charge, stabilize Bluetooth, and retry the update — escalating only if multiple resets fail.

🧭 Associate Flow

1. **Check Basics**

●

Confirm the ring is

charged at least 50%

.

●

Ask the user to

keep the ring on its charger

and

phone nearby

during the update.

●

Recommend minimizing other Bluetooth connections.

2. **Restart & Retry**

●

Have the user restart both their

phone and the Ultrahuman app

.

●

Ask them to remove and re-place the ring on the charger, then retry the firmware update.

3. **If Update Still Fails**

●

Trigger a

Soft Reset

from the backend.

●

Once complete, have the user retry the firmware update.

4. **If It Continues to Fail**

Revised TOP FAQ/SOPs 20

●

Ask the user to perform a

Factory Reset

on the ring and attempt the update again.

●

If the firmware update still does not go through, collect

screenshots or

error messages

and

flag the case to the tech team

for review.

💬 Suggested Associate Message

Thanks for letting us know! Firmware updates need a stable connection and a good charge.

Please make sure your ring is at least 50% charged and on its charger while updating.

I'll trigger a quick reset from our side — once that's done, please try the update again.

If it still doesn't go through, we'll try a quick factory reset and take it from there.

🧩 Notes for Associates

●

Always confirm

battery ≥50%

before triggering resets.

●

Soft reset → Factory reset → Tech flag

is the escalation order.

●

Collect

screenshots

for tech review in persistent cases.

ORDERS, SIZING AND SHIPPING

Q: I received my sizing kit. How do I submit my ring size and color choice? / The app won't let me select my size/color.

🧠 User Intent

The user has received their sizing kit and wants to finalize their **ring size and color selection**.

🧭 Associate Flow

1. **Guide the User to Submit Size and Color**

Revised TOP FAQ/SOPs 21

●

Ask the user to wear their

best-fitting sizer for at least 48 hours

to confirm comfort and fit.

●

Once ready, guide them to:

○

Open the

Ultrahuman app

→ tap the

Ring tab

, or

○

Use their order tracking link: (Unique for each order)

●

Tap

“Track It”

or

“Edit Order”

to select the

final ring size

and

preferred

color.

2. **If the User Can’t Update via App**

●

Associates can manually update size or color from the

Ring Order → Edit

section

in the backend.

💬 Suggested Associate Message

Awesome — glad your sizing kit has arrived! Once you’ve tried the sample for about 48 hours, just open the app or click your tracking link.

Tap *“Track It”* or *“Edit Order”* to choose your final size and color.

If that doesn’t work for any reason, I can update it manually for you right here.

📁 **Tags**

ring_sizing_kit_faqsring_sizing_kit_fit_issuesring_size_colour_edit

Q. Can I change my ring size or color after I’ve already confirmed it?

🧠 User Intent

The user wants to change their **ring size or color** after confirming their order.

🧭 **Associate Flow**

1. **Check If the User Can Edit via Tracking Link**

●

Ask them to open their

order tracking link

(e.g.) and look for the

“Edit Order”

option.

Revised TOP FAQ/SOPs 22

- Edits are usually allowed until the order status shows
“Processed”
or
“Preparing for Dispatch.”

2. **If Edit Option Isn’t Available**

- This may happen if:

  - The order has
different pricing across variants
, or

  - The order is already
allocated or shipped.

- **If allocated:**
flag to the logistics/order team to check if an edit is still possible.

- **If shipped:**
politely inform the user that changes can’t be made once dispatched.

3. **Reassure the User (Size Exchange Option)**

- If the user’s concern is
size
, remind them that we offer a
30-day size
exchange window
if the fit isn’t right.

●

The same applies to color variants — they can request a change once they've received the ring.

💬 Suggested Associate Message

That's a great question — in most cases, yes, you can still make changes before your order is processed.

Just open your tracking link and tap *"Edit Order."* If that option isn't visible, it likely means the order's already been allocated or shipped.

If it's already shipped, don't worry — we offer a **30-day exchange window** in case your size or color doesn't feel right once you try it on.

🏷️ Tags

ring_size_colour_edit

Q. Where is my order/sizing kit? When will it ship or arrive?

🧠 User Intent

Revised TOP FAQ/SOPs 23

The user wants to know the **status or expected delivery** of their sizing kit or ring order.

🧭 Associate Flow

1. **Guide the User to Track Their Order**

●

Ask them to open their order tracking link (from the confirmation email or app):

👉 (Unique for each user)

●

They can view

current status, estimated ship date, and tracking details

once available.

2. **Set Delivery Expectations**

●

Sizing kits:

usually ship within

48 hours

, though minor delays can occur by region.

●

Rings:

typically dispatch within

7–10 business days

after size confirmation (depending on color and size availability).

●

Delivery time:

usually

4–7 business days

once shipped.

3. **If There's an Unusual Delay**

●

Check backend order details and

flag to the Operations team

for review and update if the order appears stuck or delayed beyond normal timelines.

💬 Suggested Associate Message

Totally get the excitement — we can't wait for you to get it either!

You can track your order or sizing kit anytime using your tracking link: . (Unique for each user)

Sizing kits usually go out within 48 hours, and rings ship about 7–10 business days after you confirm your size.

If it seems unusually delayed, I'll flag it to our operations team right away and make sure you get an update soon.

🏷️ Tags

Revised TOP FAQ/SOPs 24

ring_logistics_ETA

Q. I need to change my shipping address after ordering.

🧠 User Intent

The user wants to update their **shipping address** after placing an order.

🧭 Associate Flow

1. **If the Order Hasn't Shipped Yet**

●

Ask the user to open their

order tracking link

: (Unique for each user)

●

If the new address is

within the same country

, they can usually update it directly via the link (before the order is processed).

●

If they're unable to edit or the new address is in a

different country

, collect:

○

Order ID

○

Full new address details

→ Then update it on OMS and mention on Cx-ops channel to respective Ops POC.

2. **If the Order Has Already Shipped**

●

Once dispatched, the address can't be changed directly from Ultrahuman's side.

●

Suggest the

post-dispatch features

offered by the logistics partner (as per) — e.g., local reroute, pickup point change, or delivery reschedule.

●

If none of those options work, then only

flag to the Ops team POC

with full user details for further assistance.

💬 Suggested Associate Message

Let's see what we can do about that!

Revised TOP FAQ/SOPs 25

If your order hasn't shipped yet, you can usually update the address yourself from your tracking link: . (Unique for each user)

If it's already shipped, most of our delivery partners offer post-dispatch options like rerouting or pickup changes — I can share those details with you.

If that's not possible, I'll flag it to our Ops team right away to see what can be done.

🏷️ Tags

logistics_address_contact_update

🧩 Notes for Associates

●

Confirm shipping status before committing to an edit.

●

Use

post-dispatch reroute features

for shipped orders whenever possible.

●

Escalate to

Ops POC

only when user can’t self-serve via tracking or partner tools.

REFUNDS, RETURNS AND CANCELLATIONS

Q. How do I return my ring for a refund? What’s the policy?

🧠 User Intent

The user wants to understand the **return and refund policy** and how to initiate the process.

🧭 Associate Flow

1. **Confirm Eligibility**

●

The user has a

30-day return window

from the date the ring was

delivered or activated

.

●

If the user is within this window, proceed to the next step.

●

If outside the window, please act according to the new Refund Policy.

2. **Engage & Assist**

Revised TOP FAQ/SOPs 26

●

Ask the reason for return — if it’s an issue, offer to troubleshoot first (many cases can be resolved quickly).

●

If the user still prefers to return, confirm return initiation.

3. **Start the Return Process**

●

Inform the user that the

return label

will be generated and shared within

2–3 business days

.

●

Ask them to pack the

ring and charger securely

and hand it over to the designated courier (USPS / FedEx / DHL).

4. **Refund Timeline**

●

Once the return is received or scanned as in transit, initiate refund processing.

●

Refunds typically reflect in

5–7 business days

via the original payment method.

💬 Suggested Associate Message

Absolutely — here's how our return process works:

You have **30 days from delivery or activation** to decide if you'd like to return your ring.

If you're still within that window, I'll start the process and have your return label sent in about 2–3 business days.

Once you ship the ring and charger back, we'll process your refund — it usually appears in your account within **5–7 business days**.

If there's an issue we can fix before that, I'm happy to help troubleshoot too!

🏷️ Tags

ring_refund

🧩 Notes for Associates

●

Always confirm

delivery or activation date

before approving returns.

Revised TOP FAQ/SOPs 27

●

Offer troubleshooting first if the issue seems fixable (battery, connection, etc.).

●

Once return is initiated, track label and refund completion in backend.

Q. I need to cancel my order before it ships.

🧠 User Intent

The user wants to cancel their **order before dispatch** and understand the refund process.

🧭 Associate Flow

1. **Confirm Order Status**

●

Ask the user for their

Order ID

.

●

Check if the order has been

processed for dispatch

(packed or marked “Ready to Ship”).

●

If it hasn’t been processed yet, proceed with cancellation.

2. **Cancel and Refund**

●

Cancel the order in the system.

●

Inform the user that a

full refund

will be issued to their original payment method.

●

Refunds typically reflect in

5–7 business days

.

3. **If the Order Is Already Processed or Shipped**

●

Explain that cancellation isn't possible at this stage.

●

Offer to assist once the item arrives — e.g., via

return or exchange

options.

💬 Suggested Associate Message

Got it — let's take care of that for you.

If your order hasn't been packed or marked for dispatch yet, we can cancel it right away and issue a full refund.

Revised TOP FAQ/SOPs 28

The refund will appear in your account within **5–7 business days**.

If it's already shipped, we can still help once it arrives — you'll be able to request a return or exchange easily.

🏷️ Tags

ring_refund

🧩 Notes for Associates

●

Always verify

order dispatch status

before confirming cancellation.

●

Refund timelines:

5–7 business days

after processing.

●

For shipped orders, direct to

return policy

instead.

Q. My ring arrived, but I want to return it (changed mind, duplicate gift, not satisfied).

🧠 User Intent

The user wants to return their ring for **non-technical reasons** such as a duplicate gift, change of mind, or general dissatisfaction.

🧭 Associate Flow

1. **Confirm Eligibility**

●

The user must be within the

30-day return window

from delivery or activation date.

●

If eligible, proceed with the return process.

2. **Collect Return Reason**

●

Ask the user for a brief reason (e.g.,

"Received as duplicate,""Not as

expected"

).

●

No troubleshooting needed for these cases — proceed directly to return initiation.

3. **Initiate Return Process**

Revised TOP FAQ/SOPs 29

●

Generate and share

return shipping labels

(usually within

2–3 business

days

).

●

Instruct the user to

pack the ring and charger securely

and hand them to the designated courier (USPS / FedEx / DHL).

4. **Refund Timeline**

●

Once the return is received or marked “in transit,” the refund is processed automatically.

●

Refunds usually reflect in

5–7 business days

via the original payment method.

💬 Suggested Associate Message

No problem at all — we can help with that!

Just reach out within **30 days** of delivery, and we’ll start your return process.

We’ll send you a prepaid return label within a couple of business days so you can ship the ring and charger back.

Once we receive it, your refund will be processed — it usually takes **5–7 business days** to reflect in your account.

🏷️ Tags

logistics_reverse_pick_upring_refund

🧩 Notes for Associates

●

Confirm return eligibility (within 30 days).

●

No need for troubleshooting — direct return flow applies.

●

Track return label and refund confirmation in backend.

DATA ACCURACY

Q23. My step count seems inaccurate compared to my Apple Watch/Fitbit.

🧠 User Intent

Revised TOP FAQ/SOPs 30

The user reports differences in step count compared to other wearables. The goal is to confirm accuracy, ensure ring fit and firmware are correct, and clarify expectations.

Relevant SOP:

🧭 Associate Flow

1. **Set Expectations**

- Explain that **10–15% variation** between devices is normal since the ring tracks motion from the **finger** while watches track from the **wrist**.
- Different algorithms and positions cause natural differences.

2. **Check Fit & Cleanliness**

- Confirm the ring fits **snugly** (not loose or rotating).
- Sensors (green lights) should face the **inner side of the palm**.
- Ask the user to **clean the sensors** if dusty or oily.

3. **Verify Firmware**

- Confirm the ring is on the **latest firmware**.
- If outdated, push the update using #Pushto_Zephyr and ask the user to observe for 24 hours.

4. **Factory Reset (If Needed)**

●

If step counts remain significantly off, suggest a

factory reset

to recalibrate.

5. **If Issue Persists**

●

Reassure that

step tracking optimization is ongoing

and firmware updates will continue to improve accuracy.

●

Clarify that

Apple Watch

is the only valid point of comparison.

●

Do not flag these cases

— close them after sharing the explanation.

💬 Suggested Associate Message

Revised TOP FAQ/SOPs 31

Thanks for checking this! Small differences in step counts are normal since the ring tracks motion from your finger while watches do it from your wrist.

Let's make sure your ring fits snugly and is updated — that usually improves tracking.

If it's still noticeably off, a quick reset can help recalibrate.

We're continuously improving accuracy through firmware updates, so future versions will keep getting better.

🏷️ Tags

Ring incorrect movement_index

🧩 Notes for Associates

●

10–15% variance is normal.

●

Only

Apple Watch

comparison is valid.

●

Don’t flag these — log, explain, and close.

Q24. My sleep wasn’t tracked last night / Sleep data seems inaccurate.

🧠 User Intent

The user reports **missing or inaccurate sleep data**. The goal is to verify fit, firmware, and sensor behavior, then identify if it’s a **fit issue**, **sensor issue**, or **data upload problem**.

Relevant SOP:

🧭 Associate Flow

1. **Check the Basics**

●

Was the

ring charged (≥30–50%)

before bedtime?

●

Is the

ring fit snug

(not loose, sensors touching skin)?

●

Did the user

sync the ring in the morning

to pull sleep data into the app?

●

Ask them to

clean sensors

gently and check for

firmware updates

.

Revised TOP FAQ/SOPs 32

2. **If User Reports *No Sleep Data at All***

●

Verify

ring fit and orientation

— sensors should face the palm side.

- Push the **latest firmware** (if not already updated).
- Ask the user to **observe for the next sleep cycle**.
- Check the **Sleep Diagnosis Dashboard** for HR and motion data.

Based on Diagnosis:

- **No data on dashboard:** Follow **data not uploading** flow.
- **HR data visible but high motion / missing HR spikes:** likely **fit issue** → push a *soft reset* and suggest wearing on a **different finger** for 24 hrs.
- **Missing HR/temp data (Ring State 10 or 20):** likely **sensor issue** → perform a *factory reset* and ask user to observe for another 24 hrs.

- If still no sleep data → **flag to tech team** for review.

3. **If User Reports *Partial Sleep or Missing Chunks***

- Reconfirm **fit and firmware** status.
- Check **Sleep Diagnosis Dashboard** for HR/motion patterns.
- If motion/HR interruptions appear, treat as a **fit issue** (suggest swapping finger and soft reset).
- If consistent missing HR/temp data, treat as a **sensor issue** (factory reset and observe 24 hrs).
- If battery drops overnight, follow **Battery TS flow** instead.

4. **Known States**

- **Ring State 10 / 20** → Sensor issue → Factory Reset and observe.

●

Ring State 255

→ Hardware-level sensor issue → Factory Reset; if

persists, flag to tech.

💬 Suggested Associate Message

Revised TOP FAQ/SOPs 33

Thanks for flagging that! Let’s check a few things to make sure your sleep is tracked correctly.

Ensure your ring was charged before bed, fits snugly, and the sensors are clean.

I’ll push the latest firmware to your ring — please observe for tonight’s sleep cycle.

If it still misses or shows partial sleep data, we’ll do a quick reset and review the sensor data to fix it.

🏷️ Tags

Ring_incorrect_sleep_data

🧩 Notes for Associates

●

Always verify

fit

,

battery

, and

firmware

first.

●

Ring State 10 / 20 / 255

→ treat as sensor issue.

●

Do not flag for product issue unless sensor fails post-reset + next sleep cycle.

Q: My workout wasn't detected automatically / My logged workout disappeared.

●

Automatic Detection:

Your ring is pretty smart and tries to automatically detect workouts like walking or running when it notices a sustained elevated heart rate and the right kind of movement. However, it might not catch every single type of workout, especially things like weightlifting or yoga where the movement patterns are a bit different.

●

Pro Tip:

For guaranteed tracking of any workout, it's always best to manually start 'Workout Mode' in the app before you begin. That way, you know it's definitely recording!

●

Logged Workout Disappeared?

It is frustrating if something you manually logged has vanished! That sounds like it could be a rare sync glitch.

Revised TOP FAQ/SOPs 34

●

First, try completely closing and restarting the Ultrahuman app. Sometimes that's all it takes for things to reappear.

●

Also, double-check that your ring was properly connected to your phone during and right after you logged the workout.

●

If it's still missing, give it a little time; sometimes data can take a short while to fully sync up. If it doesn't show up after a reasonable wait and an app restart, it might be worth reaching out to support.

Q25. How do I log food or add custom food items?

Tracking your meals is a great way to understand your health data better! Here’s how it works in the Ultrahuman app:

●

Tap the

‘+’

or

‘Log Event’

button in the app, select

‘Food’

, and search for the item you’d like to log.

●

If a specific food isn’t available, try finding the

closest match

in our database or log the

main components

of your meal separately.

●

At present, the app doesn't support adding completely

custom food items

, but this feature may come in future updates.

●

For the latest info or tips, check the

Help section

in the app or reach out to our

Support team

anytime!

HARDWARE ISSUES

Q. My ring is physically damaged (cracked, deformed, or stuck on the charger).

🧠 User Intent

The user reports visible or structural damage to the ring — cracks, deformation, or charger fit issues. The goal is to verify the issue and guide toward a resolution or replacement.

🧭 Associate Flow

Revised TOP FAQ/SOPs 35

1. **Acknowledge and Collect Evidence**

●

Ask the user to share

clear photos or a short video

showing the damage (crack, bend, stuck on charger, etc.).

●

Ensure both the

inner sensor area

and

outer body

are visible.

2. **Understand What Happened**

●

Ask briefly if the damage was caused by a

drop

,

charger issue

, or

chemical exposure

to assess cause.

3. **Check Coverage**

- Verify if the user is covered under

standard warranty

or

UltrahumanX

plan

.

- Refer to the for damage type and eligibility.

4. **Replacement Decision**

- If it’s a

hardware defect or non-impact issue

(like stuck on charger), initiate a replacement.

- If it’s

impact damage

, process under

UltrahumanX accidental claim

(if applicable).

- Advise:

Never force the ring off the charger.

💬 Suggested Associate Message

Thanks for sharing that! I’ve noted the damage — we’ll get this resolved quickly.

Could you please send me a couple of clear photos or a short video of the affected area?

I'll check your coverage and confirm the next steps for a replacement or repair. Please don't try to remove or force the ring off the charger in the meantime.

💡 **Helpful Resources**

●

Revised TOP FAQ/SOPs 36

🏷️ Tags

Depends on case to case basis

🧩 Notes for Associates

●

Confirm

warranty or UHX coverage

before replacement.

●

Do not

advise user to remove a stuck ring by force.

●

Document damage visuals before proceeding.

Q21. Can I swim or shower with the ring? What temperatures can it withstand?

Absolutely! The **Ultrahuman Ring AIR** is built to handle your active lifestyle.

●

It's

water-resistant up to 100 meters

, so you can safely

swim, shower, or wash your hands

with it on.

●

We don't recommend

submerging it in water for more than 30 minutes

at a stretch.

●

Temperature range:

The ring performs well between

20°C to 60°C

(

4°F to 140°F

), meaning

ice baths, showers, and saunas

are all perfectly fine.

💡 *Everyday water exposure and temperature variations won't affect your ring's performance.*

SUBSCRIPTIONS AND WARRANTY

Q16. I purchased UltrahumanX / Cardio Adaptability but it's not showing as active in my app.

🧠 User Intent

Revised TOP FAQ/SOPs 37

The user has purchased a **subscription or add-on** but doesn't see it activated in their Ultrahuman app.

🧭 Associate Flow

1. **Check for Email Mismatch**

●

Confirm if the

purchase email

and

app login email

are the same.

●

Most often, the subscription is tied to a

different email

used at checkout.

2. **Request User Details**

●

Ask for both:

○

The

purchase email

(used during checkout), and

- The

app login email

(used to sign in).

- Once received, verify the transaction and map the subscription to the correct account.

3. **DIY Option for Users**

- Guide them to try linking manually via:

Profile → Settings → Transfer Ring & Add-Ons

- This sometimes resolves it instantly on the user's end.

4. **If Manual Linking Fails**

- The associate can

create/activate the subscription manually

for the correct timeline based on the

invoice date

.

💬 Suggested Associate Message

That sometimes happens if the purchase was made using a different email than the one you use to log into the app.

Could you please share the email used for the purchase and the one you use to log into Ultrahuman? I'll get it activated right away.

You can also try linking it yourself via *Profile → Settings → Transfer Ring & Add-Ons*.

If that doesn't work, I'll manually activate your subscription from here.

Revised TOP FAQ/SOPs 38

🧩 Notes for Associates

-

Always confirm both

purchase

and

login emails

.

-

If self-linking doesn't work,

create or map the subscription manually

for the correct duration as per invoice.

Q. What does the UltrahumanX plan cover?

UltrahumanX is our **optional protection and benefits plan**, designed to give you extra peace of mind and exclusive perks.

Here's what's typically included:

🕐 **1-Year UltrahumanX Plan**

-

Coverage for

one accidental damage claim

.

-

Priority support access

for faster resolutions.

-

Enhanced trade-in value

if you decide to upgrade your ring later.

🕑 **2-Year UltrahumanX Plan**

Includes all 1-Year benefits, plus:

-

One-time theft or loss coverage.

-

Weight loss replacement benefit:

if you experience a significant weight change after 6+ months of use and the ring no longer fits, you may be eligible for a

one-time size replacement

(proof of weight change required).

●

For detailed eligibility for weight loss replacement and process, refer to the .

💡 *Plan details may be updated periodically, so always refer to the terms active at the time of purchase.*

UHX_FAQ

Q18. My ring was a gift with subscriptions. How do I activate them on my account?

Revised TOP FAQ/SOPs 39

Getting those subscriptions activated on your account is usually pretty straightforward.

●

The best way is to

contact our support team

.

●

Share your

app login email

.

●

If possible, also provide the

purchaser's email address

(the person who gifted it to you) or the

original Order ID

.

●

With that information, the team can verify the included subscriptions and

link them to your account

so you can start enjoying the benefits right away.

Q19. Is the warranty / UltrahumanX valid if I buy the ring in one country and move to another?

UltrahumanX coverage is **region-specific**, so it may not appear as active while you're traveling. Once you're back in your **home country**, it should reflect and function normally.

While UltrahumanX offers **global coverage**, there can occasionally be **regional limitations** or differences in how service and replacements are handled.

If you've **relocated permanently**, reach out to the **Support team** — they can help adjust your subscription region and confirm the coverage details for your new location.

UHX_FAQ

Q20. How does the weight loss replacement work under the 2-Year UltrahumanX plan?

First off — congrats on your progress! 🎉 If your ring no longer fits due to significant weight loss, you may qualify for a **one-time size replacement** under the 2-Year UltrahumanX plan.

Revised TOP FAQ/SOPs 40

Here's how it works:

●

The

2-Year UltrahumanX plan

must be

activated within 30 days

of purchase.

●

You should have been using your ring for

at least 3 months.

●

The weight loss must make your current ring

too loose to wear properly.

●

Proof of weight change may be requested (e.g., verified scale logs or photos).

●

Simply

contact our Support team

— they'll verify eligibility and guide you through the replacement process.

📘 For full details, check the .

If you still can't find the answers you're looking for, here's a bunch of documents you can refer to. Remember you can also quick-search [command + F on Mac, keyboard shortcut Windows key + S on windows] keywords to find relevant information!

- our comprehensive CX textbook!
- everything you need to know Ring AIR!

: focusing on troubleshooting and Faqs, specially for the M1

Revised TOP FAQ/SOPs 41

Q: My workout wasn't detected automatically / My logged workout disappeared.

- **Automatic Detection:** Your ring is pretty smart and tries to automatically detect workouts like walking or running when it notices a sustained elevated heart rate and the right kind of movement. However, it might not catch every single type of workout, especially things like weightlifting or yoga, where the movement patterns are a bit different.
- **Pro Tip:** For guaranteed tracking of any workout, it's always best to manually start 'Workout Mode' in the app before you begin. That way, you know it's definitely recording!
- **Logged Workout Disappeared?** It is frustrating if something you manually logged has vanished! That sounds like it could be a rare sync glitch.
- First, try completely closing and restarting the Ultrahuman app. Sometimes that's all it takes for things to reappear.
- Also, double-check that your ring was properly connected to your phone during and right after you logged the workout.
- If it's still missing, give it a little time; sometimes data can take a short while to fully sync up. If it doesn't show up after a reasonable wait and an app restart, it might be worth reaching out to support.

Q25. How do I log food or add custom food items?

Tracking your meals is a great way to understand your health data better! Here's how it works in the Ultrahuman app:

- Tap the **'+'** or **'Log Event'** button in the app, select **'Food'**, and search for the item you'd like to log.
- If a specific food isn't available, try finding the **closest match** in our database or log the **main components** of your meal separately.
- At present, the app doesn't support adding completely **custom food items**, but this feature may come in future updates.
- For the latest info or tips, check the **Help section** in the app or reach out to our **Support team** anytime!

HARDWARE ISSUES

Q. My ring is physically damaged (cracked, deformed, or stuck on the charger).

🧠 User Intent

The user reports visible or structural damage to the ring — cracks, deformation, or charger fit issues. The goal is to verify the issue and guide toward a resolution or replacement.

🧭 Associate Flow

1. **Acknowledge and Collect Evidence**
   - Ask the user to share **clear photos or a short video** showing the damage (crack, bend, stuck on charger, etc.).
   - Ensure both the **inner sensor area** and **outer body** are visible.
2. **Understand What Happened**
   - Ask briefly if the damage was caused by a **drop**, a **charger issue**, or **chemical exposure** to assess the cause.
3. **Check Coverage**
   - Verify if the user is covered under the **standard warranty** or **UltrahumanX plan**.
   - Refer to the Hardware Damage SOP Sheet for damage type and eligibility.
4. **Replacement Decision**
   - If it's a **hardware defect or a non-impact issue** (like stuck on charger), initiate a replacement.
   - If it's **impact damage**, process under **UltrahumanX accidental claim** (if applicable).
   - Advise: *Never force the ring off the charger.*

💬 Suggested Associate Message

> Thanks for sharing that! I've noted the damage — we'll get this resolved quickly.
>
> Could you please send me a couple of clear photos or a short video of the affected area?
>
> I'll check your coverage and confirm the next steps for a replacement or repair. Please don't try to remove or force the ring off the charger in the meantime.
