

# **ULTRAHUMAN HOME**

CES 2024 EXCLUSIVE LAUNCH

# **Home meets Health**

## Make your living spaces thrive

Ultrahuman Home is a silent and power packed home health monitor that helps you optimize your living space by monitoring markers that affect your health every day.

### Sleep Apnea

With multiple super-precision mics and on-device sound processing, measure sleep disturbances and potential apnea events.

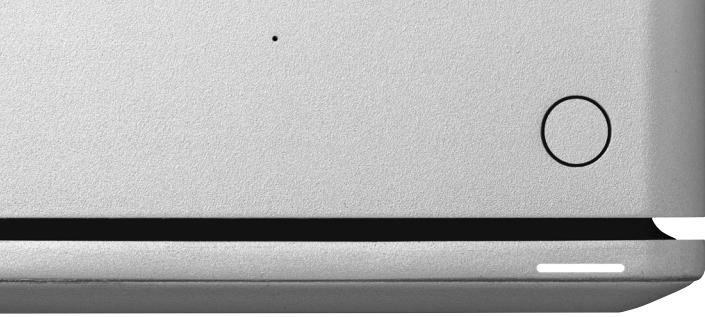

### Continuous Temperature Monitoring

By analyzing the external temperature, you can optimize your sleep environment for improved rest, with positive influences on the body's circadian rhythm and overall sleep efficiency.

### Natural Light Spectrum

With Ultrahuman Home, you can measure UV and sunlight levels within your home, emphasizing the importance of maintaining optimal Vitamin D for healthy sleep patterns and circadian rhythm.

## Humidity Levels

Insufficient humidity can lead to drying of the airways, impaired mucociliary clearance, and increased risk of respiratory infection. Ultrahuman Home monitors humidity and helps you regulate your environment for optimal lung health.

## Blue light exposure

With artificial light monitoring sensors within Ultrahuman Home, you can prioritize well-being, understand its impact on circadian rhythm, and foster a healthier sleep environment.

## PM Detection

Ultrahuman Home will actively measure and notify you about particulate matter (PM) levels in the air, ensuring a safer living environment and promoting long-term respiratory health.

## Smoke Sensor

The device comes equipped with a smoke sensor, adding an extra layer of protection against potential respiratory issues. It is expected to be available by the end of 2024.

## Prioritizing Privacy

Ultrahuman Home prioritizes privacy with a mic button for on-demand microphone control and on-device processing.

## Airplane Mode

Its dim light feature supports sleep health by minimizing disruptions to circadian rhythms. The device also offers Airplane mode, which turns off wifi and Bluetooth, empowering users to take control of this exposure.

## Availability and Pricing

Ultrahuman Home will be available for purchase on Kickstarter at the end of January 2024 for USD 349, with shipping starting in July.

## Noise Detection

Maintaining healthy ambient noise levels in living environment is key to sleep health. Understand the optimal noise band that's personalised as per your sleep patterns.
